	*	November 4, 2009
BECTON DICKINSON & COMPANY	*	9:00 A.M.

TRANSCRIPT OF JURY TRIAL  
BEFORE THE HONORABLE DAVID FOLSOM  
UNITED STATES DISTRICT JUDGE

APPEARANCES:

FOR THE PLAINTIFF:

MR. ROY W. HARDIN  
MR. GEORGE E. BOWLES  
MR. STEPHEN D. WILSON  
MR. MARK R. BACKOFEN  
Locke Lord Bissell & Liddell  
2200 Ross Avenue, Suite 2200  
Dallas, TX 75201

MR. OTIS CARROLL  
MS. DEBORAH RACE  
Ireland, Carroll & Kelley  
6101 So. Broadway, Suite 500  
Tyler, Texas 75703

APPEARANCES CONTINUED ON NEXT PAGE:

COURT REPORTERS: MS. SUSAN SIMMONS, CSR  
MS. JUDITH WERLINGER, CSR  
Official Court Reporters  
100 East Houston, Suite 125  
Marshall, TX 75670  
903/935-3868

(Proceedings recorded by mechanical stenography,  
transcript produced on CAT system.)

1 APPEARANCES CONTINUED:

2  
3  
4 FOR THE DEFENDANT:

MR. DAVID J. BECK  
MR. ALISTAIR B. DAWSON  
Beck Redden & Secrest  
One Houston Center  
1221 McKinney, Suite 4500  
Houston, TX 77010

MS. LISA J. PIROZZOLO  
Wilmer Cutler Pickering  
Hale and Dorr  
60 State Street  
Boston, MA 02109

MR. W. DAVID CARTER  
Mercy Carter and Tidwell  
1724 Galleria Oaks Drive  
Texarkana, TX 75503

14  
15 P R O C E E D I N G S

16  
17 COURT SECURITY OFFICER: All rise.

18 (Jury in.)

19 THE COURT: Please be seated.

20 Good morning, Ladies and Gentlemen.

21 I assume the plan is still the same;  
22 we're going to watch about 50 minutes of depositions; is  
23 that correct?

24 MR. BOWLES: That is the plan, Your  
25 Honor. Although last night, we did some cuts, so,

1 hopefully, it will be a little bit less.

2 To a little contextual talking to the  
3 jury here on the video deponents.

4 Good morning. This morning, we're --

5 THE COURT: Mr. Bowles, you'll remember  
6 to stay in touch with the podium. It's easier for the  
7 court reporter to take down your comments.

8 MR. BOWLES: I like to move around. I'm  
9 sorry. I'm always stepping on some rule.

10 This morning we have three deponents,  
11 video witnesses, that will -- we will be showing you.  
12 They are all BD witnesses, BD employees, but, really, we  
13 took their depositions, but they are BD employees.

14 And their names are Erika Bajars,  
15 B-A-J-A-R-S. She pronounces it Bajars. So during the  
16 course of the deposition -- I took her deposition so you  
17 may hear Bajars. Of course, it's Bajars.

18 Jana, J-A-N-A, Machan, M-A-C-H-A-N.  
19 You're going to see quite a few documents with her name  
20 on it. I say quite a few, maybe five or six but not a  
21 ton.

22 And then Robert Hallenbeck,  
23 H-A-L-L-E-N-B-E-C-K.

24 Now, what I'd like to do is to play the  
25 Bajars and Machan depositions first, and then I will

1 come back and tell you a little bit about  
2 Mr. Hallenbeck.

3 Now, Ms. Bajars and Ms. Machan were in  
4 the marketing section or division of BD, not engineering  
5 but marketing. They were senior -- pretty senior. One  
6 was a Senior Product Manager, another Director of  
7 Marketing. And both of them worked on safety syringes  
8 from a marketing standpoint and in Integra from a  
9 marketing standpoint.

10 Now, as you hear their testimony, I'm  
11 going to ask you to consider three things: First -- and  
12 I don't think that BD disagrees with this. I don't  
13 think this is disputed.

14 In the early 1990s, BD engineers looked  
15 at the retractable technology that was available then  
16 and concluded either that they couldn't do it or they  
17 didn't want to do it. But by 1995, they had jettisoned  
18 the idea of retractable technology.

19 Second, February of '97, February of  
20 1997, RTI comes to the market with a VanishPoint  
21 product. You've seen a lot and you've heard a lot about  
22 that product.

23 Let me just tell you that that product  
24 had a profound effect, we say and we believe, on the  
25 market. And you're going to see documents, BD internal

1 documents, in 1998/1999, where their customers are  
2 asking them about retractable technology.

3           You'll see one document where customers  
4 equate retractable technology with superior technology.  
5 BD did not have a retractable needle in 1998 or 1999.  
6 So you're going to see those documents.

7           Third -- and this is a little bit of a  
8 perfect storm for BD. The market was moving toward  
9 safety, and it was moving toward retractable but not at  
10 a real fast pace. But in 1998, California passed a  
11 needlestick legislation and then other states followed;  
12 Texas followed. I think there are 25 or 30 states that  
13 followed after that.

14           In 1998, 1999, and 2000, and then you saw  
15 Mr. Shaw with President Clinton signing -- Mr. Shaw  
16 didn't sign, but he shook his hand after he signed the  
17 legislation for the National Needlestick Prevention Act.

18           So this market that was moving away from  
19 BD, without the retractable needle, started hitting warp  
20 speed. And BD was trying to catch up, and then they  
21 were sprinting to catch up. And what they thought was  
22 going to be important, which is a retractable needle,  
23 became essential.

24           Now, what does all of this mean to you  
25 and why am I going through all of this? Nice story, but

1 what does it mean?

2                   Two things: First, it is directed  
3 specifically at the motive of BD to intentionally copy  
4 our product. But this morning, you're going to hear a  
5 lot about damages, and you're going to hear from  
6 Mr. Walt Bratic, who is our expert, who's sitting in the  
7 courtroom today. And he's going to take this  
8 information, and he's going to synthesize it for you.  
9 He's going to talk to you about it.

10                   Remember this: That our damage model is  
11 a reasonable royalty damage model. Reasonable royalty.  
12 And that's based on a hypothetical negotiation that  
13 would have taken place at the time of first  
14 infringement, which was May or the spring of 2000.

15                   And all of these events that I've  
16 described for you -- and you're going to hear from the  
17 witnesses -- sort of came to a head in the spring of  
18 2000.

19                   So with that, we'll go ahead and start  
20 the Bajars and Machan -- Bajars, then Machan  
21 depositions.

22                   THE COURT: John, if you'll lower the  
23 lights.

24                   (Video playing.)

25                   QUESTION: Okay. Let me ask you this:

1 This is dated June 4th, 1997. Using this as a  
2 benchmark, when is it do you think, generally, that you  
3 first heard about either RTI or the VanishPoint syringe?

4 ANSWER: My recollection is that that  
5 product launched sometime in 1996.

6 QUESTION: And did you hear about it  
7 after the launch?

8 ANSWER: Yeah, I believe so.

9 QUESTION: Had you heard about it before  
10 the launch, that you can recall?

11 ANSWER: I don't remember that I did.

12 QUESTION: In 1997, was BD offering a  
13 retractable syringe?

14 ANSWER: No, we were not.

15 QUESTION: Ms. Bajars, you have in front  
16 of you Exhibit 95, don't you?

17 ANSWER: Yes.

18 QUESTION: This is a memo to J --

19 ANSWER: Fuchs.

20 QUESTION: -- Fuchs?

21 ANSWER: I will help you out on that one.

22 QUESTION: Thank you. I appreciate that.  
23 Dated June 8th, 1997, from Jana Machan; is that right?

24 ANSWER: Yes.

25 QUESTION: Do you recognize this

1 document?

2 ANSWER: Not specifically this one, but I  
3 know what this document is.

4 QUESTION: What is it?

5 ANSWER: It's a monthly management  
6 report.

7 QUESTION: In 1997, was Mrs. --  
8 Ms. Machan -- Machan your boss?

9 ANSWER: She was.

10 QUESTION: Did you have any input into  
11 this document, Exhibit 96?

12 ANSWER: I did.

13 QUESTION: Under competitive activity,  
14 this memo states: VanishPoint is continuing to make  
15 significant efforts to convert the safety injection  
16 market showing up at key conferences, parenthesis, APIC,  
17 A-P-I-C -- APIC, A-P-I-C, et cetera, end parenthesis,  
18 and blitzing targeted areas with direct mail,  
19 parenthesis, Texas, Northern California, Pittsburgh,  
20 Rhode Island, end parenthesis.

21 Primary targets appear to be psychiatric  
22 hospitals, home care agencies, alternate sites --  
23 alternate site, and smaller institutions that BD reps  
24 typically do not visit. Initial customer responses have  
25 been quite enthusiastic, and, luckily, many have spurred

1 SafetyGlide evaluations.

2 Latest price point is 30 cents combo from  
3 a reported site unit conversion.

4 Did you provide the information that  
5 appears in that paragraph?

6 ANSWER: I don't remember specifically,  
7 but in this type of report, I would provide the  
8 information that went -- that Jana would write into  
9 this.

10 QUESTION: Did -- did you consider RTI to  
11 be a threat to BD's business in July of 1997?

12 ANSWER: I would consider any competitor  
13 that's trying to sell directly into accounts that I'm  
14 trying to sell into as a threat, someone to be concerned  
15 about, and to understand what they're doing.

16 QUESTION: Do you have Exhibit 109 in  
17 front of you?

18 ANSWER: You're asking me if I do?

19 QUESTION: I'm sorry?

20 ANSWER: Did you ask me if I do have it?

21 QUESTION: Yes.

22 ANSWER: Yes, I have it.

23 QUESTION: On the first page of the  
24 document you have in front of you, do you see an e-mail  
25 exchange between Jana Machan and Steve Gundersen?

1 ANSWER: Yes.

2 QUESTION: Do you know who created this  
3 document?

4 ANSWER: Jana.

5 QUESTION: What was she -- was she -- let  
6 me pursue that a little bit.

7 Was she an able employee? Did she --

8 ANSWER: Yeah.

9 QUESTION: -- perform her job well?

10 ANSWER: I think so. I think people  
11 thought very highly of her.

12 QUESTION: On this page at the top, it  
13 has BD Safety Skin Injection, colon, Retractable  
14 Positioning Statements -- Statement.

15 Do you see that?

16 ANSWER: Yes.

17 QUESTION: First item says: Many  
18 customers are excited about retractable syringe  
19 technology.

20 Second one says: Many customers are  
21 asking BD about it.

22 Third statement: Some customers are  
23 equating retractable with superior technology.

24 Do you see that?

25 ANSWER: Yes.

1 QUESTION: Do you agree with those  
2 statements?

3 ANSWER: The first three bullets you're  
4 talking about?

5 QUESTION: Yes, ma'am.

6 ANSWER: Yes.

7 QUESTION: Exhibit 110, do you have that  
8 in front of you?

9 ANSWER: Yes.

10 QUESTION: It's a November -- it's a  
11 November 11th, 1999 memo from Jana Machan to the  
12 Worldwide Safety Injection Team regarding WW --  
13 Worldwide Safety Injection Team meeting November of  
14 1999.

15 Do you see that?

16 ANSWER: Yes.

17 QUESTION: Did you attend that meeting?

18 ANSWER: I don't believe so.

19 QUESTION: Go -- go to Page 223.

20 The last item is retracting.

21 Do you see that?

22 ANSWER: Yes.

23 QUESTION: And then in all -- in bold,  
24 Ms. Machan -- Machan -- Ms. Machan says: Team -- team  
25 laying out plan for much more aggressive capacity

1 ramp-up after June '01 launch.

2 Do you see that?

3 ANSWER: It says January '01.

4 QUESTION: I'm sorry. You're right. It  
5 says January '01 launch.

6 Do you see that?

7 ANSWER: Yes.

8 QUESTION: Okay. Okay. Then if you go  
9 over to the last box relating to retracting.

10 ANSWER: Sorry.

11 QUESTION: This is on Page 223. Do you  
12 see that?

13 ANSWER: Yes.

14 QUESTION: Ms. Machan says: Market  
15 research has confirmed this as our strongest platform.

16 And she's referring to the retractable  
17 device, right?

18 ANSWER: It looks that way, according to  
19 this document.

20 QUESTION: Market research has confirmed  
21 this as our strongest platform. We must push  
22 harder/faster so as not to miss the window of  
23 opportunity as national market starts -- as national  
24 market starts to move.

25 Did I read that correctly?

1 ANSWER: Yes.

2 (Video clip stops and then continues.)

3 QUESTION: In 1996, was BD internally  
4 working on a retractable -- a retractable safety needle  
5 device?

6 ANSWER: I don't think so.

7 (Video clip stops and continues.)

8 QUESTION: Okay. Exhibit 715 is dated  
9 May 7th, 1997. It's to the same people as Exhibit 714,  
10 actually with a few more people, from Mr. Gable and  
11 Ms. Machan. The reference is Safety Day discussion on  
12 April 29, 1997.

13 And let me ask you who Dan Gable was in  
14 May of 1997.

15 ANSWER: Director of Marketing  
16 Communications.

17 QUESTION: Sheri Gay?

18 ANSWER: Sales rep.

19 QUESTION: Mike Ross?

20 ANSWER: Sales rep.

21 QUESTION: Dan Irwin?

22 ANSWER: Sales rep.

23 QUESTION: Mike Ross is listed twice.

24 ANSWER: He's very important.

25 QUESTION: Obviously. Maybe you needed

1 two.

2                   Okay. First paragraph says: Thank you  
3 for participating in this meeting and sharing your  
4 experience and customer insights. We found the day  
5 quite interesting and productive.

6                   Then under conclusions, first paragraph  
7 is: A significant new safe skin injection platform,  
8 option one, and a new product development effort to  
9 capture a major share of the skin injection  
10 hypodermic -- skin injection hypodermic market, option  
11 two, were both rejected overwhelmingly --  
12 overwhelmingly.

13                   Do you recall those two options?

14                   ANSWER: I don't.

15                   QUESTION: Look at Page 016.

16                   Up at the top, it has strategic options.

17                   Do you see that?

18                   ANSWER: Yes.

19                   QUESTION: And let me stop and ask you,  
20 have -- have you ever seen Exhibit 715 before?

21                   ANSWER: This whole exhibit?

22                   QUESTION: Yes.

23                   ANSWER: Yes. I'm sure that I have. My  
24 name is on the copy list. I just -- I don't remember it  
25 that well.

1 QUESTION: I understand. But you believe  
2 you received it?

3 ANSWER: Yes, I do.

4 QUESTION: Okay. And then on 016,  
5 Page 016, No. 1 under strategic options: Big bang, in  
6 quotation marks, platform to change the basis of  
7 competition with safety as the focus.

8 And Strategic Option No. 2, build a new  
9 product to capture a big safety niche, 50 to 60 percent,  
10 includes insulin. A do-over. This is not SafetyGlide.

11 Do you see that?

12 ANSWER: Yes.

13 QUESTION: In looking at Page 016, does  
14 that refresh your recollection as to those two options?

15 ANSWER: Yes.

16 QUESTION: Those two options as stated  
17 there is what you recall as being Option No. 1 and  
18 Option No. 2 as discussed at Safety Day?

19 ANSWER: Yes.

20 QUESTION: Okay. Then back on -- and you  
21 can certainly look at 016, but I'm back on 012, the next  
22 paragraph says: Developing a product that meets all the  
23 customers' criteria -- this would be the second  
24 paragraph under conclusions -- developing a product that  
25 meets all the customers' minimum criteria at no more

1 than 0.01 cent, dollars -- 1 cent, essentially -- over  
2 the current hypodermic cost cannot be done without  
3 starting over in R&D and manufacturing. Even then,  
4 current thinking is such that such a product cannot be  
5 created.

6 Third paragraph: Safety has low  
7 relevance and value to both economic buyer and the  
8 clinical user. See attached chart. The value is even  
9 lower in sites outside of the hospital.

10 Option No. 4: Optimize SafetyGlide was  
11 the preferred strategy.

12 Then the next paragraph says: SWAT,  
13 market research.

14 Those are the first three words in the  
15 next paragraph. Do you see that?

16 ANSWER: Uh-huh.

17 QUESTION: So the approach was to pursue  
18 sort of the niche market model?

19 ANSWER: Yes. You have to remember this  
20 was before any hint of legislation, and we had just done  
21 market research that said that people wouldn't even pay  
22 a penny more for safety.

23 So there was a lot of concern at this  
24 particular meeting that those sales reps made a big  
25 difference, because they made a passionate plea to keep

1 SafetyGlide going because they felt so strongly that  
2 customers were going to love it once we had a chance to  
3 get some traction with it.

4           So it was a big win to get Option 4 going  
5 at that time, because people -- people that actually had  
6 sold SafetyGlide felt absolutely passionate about  
7 keeping it on the market.

8           QUESTION: And -- and -- and there was no  
9 sense -- in April and May of 1997, there was no sense of  
10 urgency in the market to convert to safety.

11           Is that a fair statement?

12           ANSWER: That is a fair statement.  
13 That's a fair statement.

14           (Video clip stops and continues.)

15           QUESTION: Okay. I've given you  
16 Exhibit 127, which is an e-mail from you to Mr. Kozy.  
17 It's dated November 17th, which was about a little bit  
18 less than a week after Exhibit 268, the document we just  
19 went over.

20           In it you say: Bill, as you requested,  
21 here is a quick update on Premiere/Saf-T-Med as per the  
22 outcome of the Monday meeting. Melanie, Jon, and I...  
23 And let me make sure we identify for the record.

24           Melanie O'Neill, is that who you're  
25 referring to when you say Melanie?

1                   ANSWER:   Yes.

2                   QUESTION:   And what was her position with  
3 Becton Dickinson in November of 1998?

4                   ANSWER:   She was a vice president of, I  
5 believe, all of the safety engineered products across --  
6 not just BD division, but across some other divisions as  
7 well.   I don't recall the specific title.

8                   QUESTION:   Was she above you in the  
9 organization?

10                  ANSWER:   Yes.

11                  QUESTION:   All right.   And Jon would be  
12 Jon Bell, right?

13                  ANSWER:   Yes.

14                  QUESTION:   Melanie, Jon, and I presented  
15 to Premiere on Monday for approximately one hour,  
16 briefing them on safety environment, BD positions, and  
17 BD hypo safety product development.

18                  Do you see that?

19                  ANSWER:   Yes.

20                  QUESTION:   Do you -- do you recall the  
21 meeting?

22                  ANSWER:   No.

23                  QUESTION:   Then you go on to say, sort of  
24 wandering around here a little bit, but let me get you  
25 back to Exhibit 127.

1                   In the second paragraph, you say: You  
2 know, there are a few -- there were -- there were few  
3 questions on product development; then the parenthesis  
4 that we just went through.

5                   Then you say: But we, underlined, were  
6 asked, underlined, specifically if we were looking at  
7 retractables currently. We gave the yes; we're still  
8 exploring that, and we're always open to good, new  
9 products -- I'm sorry -- quotes: Yes, we're still  
10 exploring that, and we're always open to good, new  
11 products, end quote, stock answer.

12                   Do you see that?

13                   ANSWER: Yes.

14                   QUESTION: When you say stock answer, was  
15 that an answer that you had given before, prior to your  
16 meeting with Premiere? What do you mean by stock  
17 answer?

18                   ANSWER: I can't recall if I would have  
19 personally given it before, but stock answer would mean  
20 this is the way we would generally answer customers who  
21 asked us this specific question.

22                   QUESTION: Do -- do you recall that  
23 Premiere -- in the meeting that you do remember, do you  
24 recall them asking whether Becton Dickinson was looking  
25 at retractables?

1                   ANSWER: I don't remember them asking,  
2 no.

3                   QUESTION: You don't?

4                   ANSWER: Not specifically.

5                   QUESTION: So -- I mean, you don't doubt  
6 that it occurred because you put it in this, right?

7                   ANSWER: That would be correct. I  
8 remember being at the meeting, and that's about it.

9                   QUESTION: Ms. Machan, the court reporter  
10 has handed you Exhibit 304, which is a -- looks like a  
11 deck of PowerPoint slides.

12                   On the first page, it looks like WW Safety  
13 Injection Team update, and then underneath that, NALT  
14 meeting, December 17th, 1998.

15                   Do you see that?

16                   ANSWER: Yes.

17                   QUESTION: Do you recognize this  
18 document?

19                   ANSWER: Not specifically, no.

20                   QUESTION: Do you know if you had any --  
21 any input into its creation?

22                   ANSWER: I believe I did have input into  
23 its creation.

24                   QUESTION: In -- in looking at Page 022,  
25 is it possible that you drafted this page?

1                   ANSWER:  I don't know either way.  I  
2 might have.  I might not have.

3 QUESTION: Could somebody -- could it be  
4 or was it -- I guess anything could be -- but was it --  
5 do you recall that someone that reported to you drafted  
6 this page, and then you reviewed it before it was  
7 included?

8                   ANSWER: That is also possible, but I  
9 don't recall.

10 QUESTION: Okay. First bullet item says:  
11 Bigger market allows more than one platform to be  
12 profitable.

13                   Next bullet item: Aggressive look at  
14 retractables. RTI has proven that concept is inherently  
15 attractive to customers. Sooner rather than later  
16 someone will create a strong retractable.

17 Do you recall in December of 1998 that BD  
18 was aggressively looking at retractables?

19                   ANSWER: We have been looking at  
20 retractables all along. I think that we were certainly  
21 continuing to look at them, and as new -- as more and  
22 new designs were coming on to the market, it seemed  
23 apparent that customers were interested, so I think we  
24 were starting to accelerate our examination.

25 QUESTION: Well, here it says aggressive.

1 My question is, was -- in December of 1998, was BD  
2 aggressively looking at retractables, just like the  
3 document says?

4 ANSWER: I -- I know it says aggressive,  
5 but this could be my recommendation that we needed to  
6 look at something aggressively. This might not be the  
7 way it actually was at the time.

8 QUESTION: Okay.

9 ANSWER: As a matter of fact, I might add  
10 that I was probably advocating for this.

11 QUESTION: Advocating for?

12 ANSWER: A more aggressive approach.

13 QUESTION: Okay. Fair enough.

14 And why was that?

15 ANSWER: I think it was clear that there  
16 was customer interest in the concept. Customers, for  
17 the most part, had realized that all the marketed  
18 products to that point in time were not clinically  
19 adequate and -- but they were still intrigued by the  
20 concept.

21 And it was my belief that BD could and  
22 should be a leader in this area. Therefore, we should  
23 pursue this area.

24 QUESTION: Look at Exhibit -- do you have  
25 Exhibit 106 in front of you?

1 ANSWER: Yes.

2 QUESTION: This is a document authored by  
3 you. It's dated March 16th, 1999.

4 Do you recognize this document?

5 ANSWER: Not specifically, no.

6 QUESTION: Do you believe that you  
7 authored it and sent it?

8 ANSWER: Yes.

9 QUESTION: At the bottom on the first  
10 page, there's a chart with really horizontal columns.  
11 Conversion Scenario appears to be the title of the  
12 chart.

13 Do you see that?

14 ANSWER: Yes.

15 QUESTION: What is this chart?

16 ANSWER: This chart is, in fact, an  
17 outline of three potential market conversion scenarios,  
18 conversion from conventional to safety injection across,  
19 it looks like, six years -- five years -- yeah, a  
20 five-year time period. Six years, in fact, since  
21 year -- the first year is year zero.

22 QUESTION: Who created this chart?

23 ANSWER: I -- I would have. This is my  
24 memo.

25 QUESTION: Okay. And these are your

1 projections then?

2 ANSWER: Yes.

3 QUESTION: Based upon input from others,  
4 or did you just do that yourself?

5 ANSWER: Are you asking me about how  
6 projections were created?

7 QUESTION: How these projections were  
8 created, yeah.

9 ANSWER: In general, projections would  
10 have been created through a variety of inputs, whether  
11 it was my math work that created them or maybe one of  
12 the finance members on the team creating them. Under my  
13 direction, we would have amalgamated a number of inputs.

14 QUESTION: Before you finally published  
15 something like this?

16 ANSWER: Yes.

17 QUESTION: Exhibit 110 is a document that  
18 you authored on November 11th, 1999, Worldwide Safety  
19 Injection Team meeting, November 1999.

20 Do you see that?

21 ANSWER: Yes.

22 QUESTION: Do you recognize the document?

23 ANSWER: Not specifically.

24 QUESTION: Do you believe you sent it?

25 ANSWER: Yes.

1                   QUESTION: Under environment/strategy,  
2 first bullet, the item says: Major environmental  
3 change: Fed OSHA announcement Friday, November 5th:  
4 New bloodborne pathogen standard compliance directive  
5 has now been -- I think that probably should be  
6 issued -- Kevin Seifert working to clarify timeline  
7 aspects.

8                   Next bullet item: U.S. members of the  
9 team are preparing for a major strategy/decision-making  
10 meeting on November 19th to present conclusions from the  
11 market research, present accelerated project plans, and  
12 make recommendations for the long-term skin injection  
13 platform price strategy.

14                   Do you see that?

15                   ANSWER: Yes.

16                   QUESTION: Do you recall the meeting of  
17 November 19th?

18                   ANSWER: No, I don't.

19                   QUESTION: Look on Page 223 for the -- in  
20 the box reflecting or corresponding to the word  
21 retracting.

22                   Do you see that?

23                   ANSWER: Yes.

24                   QUESTION: First item in bold: Team  
25 laying out plan for much more aggressive capacity

1 ramp-up after January '01 launch.

2 Do you see that?

3 ANSWER: Yes.

4 QUESTION: Why was the team planning --  
5 laying out a plan for a much more aggressive capacity  
6 ramp-up, if you recall?

7 ANSWER: I recall that as federal OSHA  
8 issued this new document, that we had a general  
9 expectation that safety conversions would accelerate and  
10 that more capacity would be needed for all existing  
11 safety products, so that we would need to make more  
12 SafetyGlide, potentially more Safety-Lok even, and that  
13 products that had not reached their market yet would  
14 need to generally be accelerated and additional capacity  
15 planned for earlier than we might have thought prior to  
16 this.

17 QUESTION: Then if you'll go to the third  
18 box for retracting, it says: Market research has  
19 confirmed this as our strongest platform.

20 And this being the retracting --  
21 retractable needle platform, right?

22 ANSWER: Yes.

23 QUESTION: We must push harder/faster so  
24 as not to miss the window of opportunity as national  
25 market starts to move.

1 Do you see that?

2 ANSWER: Yes.

3 QUESTION: Do you recall the market  
4 research you're referring to?

5 ANSWER: We did a lot of market research,  
6 so, no, I don't recall the exact study or studies  
7 referred to in this document.

8 QUESTION: Okay. You have exhibit -- I'm  
9 sorry.

10 ANSWER: Thank you.

11 QUESTION: Exhibit 273 --

12 ANSWER: Yes.

13 QUESTION: -- in front of you?

14 This is -- I think this is the report of  
15 the meeting on November 19th. It's authored by you. Do  
16 you recognize this document? It's dated November 22nd,  
17 1999.

18 ANSWER: I don't specifically.

19 QUESTION: Do you believe you sent it?

20 ANSWER: Yes.

21 QUESTION: The subject is safety  
22 injection strategy, colon, recommendations?

23 ANSWER: Yes.

24 QUESTION: Do you see that?

25 Under approved recommendations, do you

1 see that?

2 ANSWER: Yes.

3 QUESTION: The second bullet item says:  
4 Maximize spring-based capacity build, parenthesis, e.g.,  
5 Manhattan project, end parenthesis.

6 Do you see that?

7 ANSWER: Yes.

8 QUESTION: The Manhattan project was the  
9 effort by the United States to build an atomic bomb in  
10 World War II; is that right?

11 ANSWER: Correct.

12 QUESTION: Is that -- is that --

13 COURT REPORTER: I'm sorry?

14 ANSWER: Yes.

15 QUESTION: Is that what you were  
16 referring to there, that Manhattan project?

17 ANSWER: No.

18 QUESTION: No? What Manhattan project  
19 were you referring to?

20 ANSWER: I was making an analogy that  
21 this would be a major, significant effort that would  
22 employ considerable amounts of resources in as  
23 compressed a timeline as we could make it.

24 QUESTION: And in that respect, it was  
25 similar to --

1 ANSWER: Yes.

2 QUESTION: -- or -- the Manhattan project  
3 would be an example of that kind of effort?

4 ANSWER: Yes.

5 QUESTION: Okay. Let me hand you Exhibit  
6 314.

7 Okay. Do you have Exhibit 314 in front  
8 of you?

9 ANSWER: Yes.

10 QUESTION: This is a document entitled --  
11 dated January 25th, 2000 from you to the Worldwide Safe  
12 Skin Injection Team.

13 Do you see that?

14 ANSWER: Yes.

15 QUESTION: Have you ever seen this  
16 document before?

17 ANSWER: I don't recall specifically.

18 QUESTION: Do you believe that you sent  
19 it?

20 ANSWER: Yes.

21 QUESTION: In the first paragraph, you  
22 say: As you know, a major, quantitative U.S. platform  
23 price/value market research study was carried out in  
24 California in late fourth quarter, fiscal year '99 or  
25 early first quarter fiscal year 2000.

1                   Immediately after this study, we also  
2 carried out a similar qualitative study looking at  
3 SafetyGlide's accounts in response to Eclipse to  
4 investigate and supplement some of the quantitative  
5 study results pertaining to SafetyGlide. All of this  
6 work was used to guide our platform strategy  
7 recommendations and platform build plans as finalized in  
8 November 1999.

9                   Do you see that?

10                  ANSWER: Yes.

11                  QUESTION: Do you recall the quantitative  
12 and qualitative market research study that was performed  
13 that you're referring to there?

14                  ANSWER: I recall the quantitative study.  
15 I don't specifically recall the qualitative study.

16                  QUESTION: What is -- what is a conjoint  
17 analysis?

18                  ANSWER: It's a highly sophisticated  
19 market research statistical methodology designed to  
20 identify -- I guess one potential output is how price  
21 elasticity occurs.

22                  REPORTER: What?

23                  ANSWER: Price elasticity occurs.

24                  In other words, how much might the market  
25 be prepared to pay for certain product attributes, and

1 there's an effort made to assess them independently of  
2 each other. Depends on how the study is designed.

3 QUESTION: Do you recall the study that  
4 you're referring to in Exhibit 314?

5 ANSWER: In broad terms, yes.

6 QUESTION: Okay. If you look at the  
7 third page, which is 764, it has Becton Dickinson. A  
8 conjoint analysis of the safety syringe and needle  
9 market.

10 Do you see that?

11 ANSWER: Yes.

12 QUESTION: What was your involvement in  
13 the conjoint analysis?

14 ANSWER: You mean in the -- in the market  
15 research study?

16 QUESTION: Yes.

17 ANSWER: My involvement was -- I don't  
18 recall the extent of my involvement. I would have been  
19 involved in the commissioning of the study and in some  
20 of the elements of early preparation. I believe I was  
21 also on site for some of the interviews.

22 QUESTION: Okay. Then on Page 766 at the  
23 top, you see the word introduction?

24 ANSWER: Yes.

25 QUESTION: So you recall this study?

1                   ANSWER: I do recall this study.

2                   QUESTION: Okay. In the first paragraph,  
3 the author of this document states: Becton Dickinson  
4 has performed additional research to explore customers'  
5 reaction to safety syringe and needle products beyond  
6 first impressions. This applies to the SafetyGlide and  
7 spring-based in particular, as the latter tends to  
8 initially wow users while the former gains favor after  
9 some use.

10                   Do you see that?

11                   ANSWER: Yes.

12                   QUESTION: Ms. Machan, is that consistent  
13 with your experience, that the spring-based product  
14 tends to initially wow users while the SafetyGlide gains  
15 favor after some use?

16                   ANSWER: That really depends on which  
17 spring product is being shown to users, to a very large  
18 extent.

19                   QUESTION: In -- in this analysis, what  
20 spring-based product was shown to the users?

21                   ANSWER: In -- in this study, this would  
22 have been our product that was in development that would  
23 have been shown.

24                   QUESTION: On Exhibit 314, Ms. Machan,  
25 would you look at Page 776?

1 ANSWER: Yes.

2 QUESTION: At the top, it appears to be  
3 part of the executive summary for the conjoint analysis  
4 of the safety syringe and needle market; is that right?

5 ANSWER: Yes.

6 QUESTION: And the first bullet item  
7 says: Preferred products, dash, acute and alternate  
8 site.

9 First sub-bullet item: Both the conjoint  
10 analysis and initial impression measurements revealed  
11 that the spring-based syringe was most favored among  
12 acute and alternate site respondents. Over three-  
13 quarters of both acute, 77 percent, and alternate site,  
14 77 percent, respondents reacted positively to the  
15 product, significantly more than any other product.

16 Do you see that?

17 ANSWER: Yes.

18 QUESTION: Is that the basis for the  
19 statement in Exhibit 110, and that's -- to help you out,  
20 that's the November 11th team meeting minutes. If you'd  
21 just look for the November 11th.

22 ANSWER: Yes.

23 QUESTION: Okay. And look at -- and I'm  
24 refreshing your memory here. We've gone through a lot  
25 of documents.

1                   If you'd look at Page 223 of that  
2 document.

3                   ANSWER: Yes.

4                   QUESTION: At the boxes corresponding to  
5 retracting, the third box: Market research has  
6 confirmed this as our strongest platform.

7                   Do you see that?

8                   ANSWER: Yes.

9                   QUESTION: Is -- is the conjoint analysis  
10 research that we're looking at right now, and  
11 particularly the page that we're on, which is 776 of  
12 Exhibit 314 -- is that the market research that  
13 supported the statement that the retractable or the  
14 retracting syringe platform was BD's strongest?

15                  ANSWER: I really can't recall  
16 specifically. It seems possible that it is.

17                  QUESTION: Certainly consistent with that  
18 statement, isn't it?

19                  ANSWER: It would be consistent.

20                  QUESTION: And then there's a chart  
21 underneath, and now I'm looking at -- flipping back to  
22 the Exhibit 314 -- flipping forward to Exhibit 314,  
23 Page 776, and there's a chart underneath the words I  
24 read, which is divided in the -- between the acute care  
25 and the alternate site.

1 Do you see that?

2 ANSWER: Yes.

3 QUESTION: And then it has in the first  
4 column listed five different products.

5 ANSWER: Yes.

6 QUESTION: And the first product,  
7 spring-based, which has received a positive result of 77  
8 percent and somewhat positive of 13 percent.

9 Do you see that?

10 ANSWER: Yes.

11 QUESTION: That's in acute. And then in  
12 alternate site, there's 77 percent in positive and  
13 4 percent positive for the spring-based product, right?

14 ANSWER: Yes.

15 QUESTION: Okay. Look at Page 779. And  
16 to put it in context, really look at 778. That's  
17 probably -- well, darn, that's a continued.

18 Well, the -- the heading, preferred  
19 products, acute and alternate site, continues through  
20 777, 778, and then on 779.

21 In the second bullet item, the conjoint  
22 analysis, the executive summary for the conjoint  
23 analysis states: In terms of unacceptability, acute  
24 clinical respondents viewed the NeedlePro, Safety-Lok,  
25 and SafetyGlide unacceptable for their practice

1 significantly more than the spring-based and Eclipse  
2 products. Out of the five products, SafetyGlide was  
3 most often considered unacceptable.

4 Do you see that?

5 ANSWER: Yes.

6 (End of video clip.)

7 MR. BOWLES: Is that it?

8 Our last video deposition is  
9 Mr. Hallenbeck. This is going to be very short. It's  
10 only seven minutes. Mr. Hallenbeck is, I think, now a  
11 Corporate Vice President of Strategic Planning at BD.

12 He's a BD employee.

13 Last year -- no, the thought just  
14 occurred to me, Your Honor. We should probably approach  
15 the bench.

16 MR. DAWSON: May we approach?

17 THE COURT: Yes.

18 (Bench conference.)

19 THE COURT: Is this the deposition  
20 subject to the protective order that you believe -- you  
21 going to go into the contents now or --

22 MR. BOWLES: No. You mean as I --

23 THE COURT: I guess --

24 MR. BOWLES: -- introduce it?

25 THE COURT: You want everyone to leave

1 before we start the video?

2 MR. BOWLES: Yes, I think we should.

3 MR. DAWSON: I think that will include  
4 Mr. Shaw.

5 THE COURT: Yeah.

6 MR. DAWSON: He's not subject to the  
7 protective order.

8 MR. BOWLES: Yeah, I agree.

9 THE COURT: Very well.

10 (Bench conference concluded.)

11 THE COURT: Ladies and Gentlemen, the  
12 deposition we're about to see contains information that  
13 would require you to be subject to the protective order  
14 entered by the Court. So those in the audience not  
15 subject to the protective order must step out for this  
16 seven minutes.

17 And then as soon as the deposition is  
18 completed, we'll let you back in the courtroom.

19 I will ask the attorneys to help me  
20 police those that might not be subject to the Court's  
21 protective order.

22 (Courtroom cleared.)

23 (REPORTER'S NOTE: The testimony is filed  
24 under seal. Sealed Section 1.)

25 THE COURT: Does that conclude the

1 deposition?

2 MR. BOWLES: That ends the deposition,  
3 Your Honor.

4 THE COURT: If someone will invite those  
5 that stepped out to step back in.

6 (Audience allowed back in courtroom.)

7 THE COURT: You may call your next  
8 witness.

9 MR. BOWLES: The Plaintiffs call  
10 Mr. Walter Bratic. This witness has not been sworn,  
11 Your Honor.

12 THE COURT: Mr. Bratic, if you'll raise  
13 your right hand, please.

14 (Witness sworn.)

15 WALTER BRATIC, PLAINTIFF'S WITNESS, SWORN

16 DIRECT EXAMINATION

17 BY MR. BOWLES:

18 Q. Good morning, Mr. Bratic.

19 A. Good morning.

20 Q. Where do you live?

21 A. I live in Houston, Texas.

22 Q. You're appearing today as an expert on damages  
23 for the Plaintiffs in this case; is that correct?

24 A. Yes, I am.

25 Q. Have you prepared a slide that summarizes your

1 qualifications?

2 A. Yes, I have.

3 Q. Why don't you -- as we're waiting on that  
4 slide, why don't you go ahead and start telling us your  
5 qualifications.

6 A. By the way, I apologize in advance. I've been  
7 having allergies all week, and I'm the one that's been  
8 coughing in the back of the courtroom all week. So I  
9 apologize in advance, but I'll do my best to keep my  
10 voice as loud as possible.

11 Q. That's great, because we -- thank you.  
12 Do you have water?

13 A. I do. I just filled up some. Thanks.

14 Q. Why don't you go ahead and start telling us  
15 what your qualifications are, and then we'll wait for  
16 the slide.

17 A. Sure.

18 Q. I mean, we won't wait for the slide. We'll  
19 just go ahead.

20 A. Well, I've been working with intellectual  
21 property patents, trademarks, trade secrets, and with a  
22 company called -- intellectual property rights, patent  
23 licensing and analysis for over 30 years now. It goes  
24 all the way back to 1975 when I got out of college.

25 And I also have my -- from an educational

1 standpoint, I have a bachelor's degree from the  
2 University of Pennsylvania in Philadelphia,  
3 Pennsylvania.

4 I also have what's called an MBA or a Master  
5 of Business Administration degree from the Wharton  
6 School of Business, which is also at the University of  
7 Pennsylvania.

8 I'm a certified licensing professional. Now,  
9 that's a designation you get by filing an application  
10 and filling out a bunch of forms and putting out a bunch  
11 of documentation and references on people that you've  
12 done licensing work for.

13 Q. All right. Well, let me -- let me ask you  
14 this.

15 A. Sure.

16 Q. Can you tell us and tell the jury, what is  
17 your real life experience in licensing negotiations for  
18 patents and other intellectual property?

19 A. Well, as the first line shows, I've been doing  
20 this for over 30 years.

21 1975, straight out of college, I ended up  
22 having an opportunity to negotiate a license for a  
23 variety of trade secrets for a dental company, a medical  
24 products company but in the dental products sector, in  
25 Philadelphia, Pennsylvania, when I graduated from

1 college.

2 Fast-forward, I spent two years after my MBA  
3 in public accounting for some big international  
4 accounting firms, and then I became the chief financial  
5 officer in 1980 for about two to two and a half years of  
6 a company called Advanced Energy Supply Company.

7 And as -- we were a company that designed  
8 technology, and we marketed the products. We actually  
9 had somebody make our products under our design. And we  
10 had 40 or so draftsmen and engineers working at the  
11 company. That's the lifeblood of the company, was  
12 designs and technology.

13 And in that process and in that capacity as  
14 the chief financial officer, I ended up getting involved  
15 in licensing technology. We licensed in patents and  
16 other types of intellectual property rights that we  
17 needed for our products, and likewise, people were  
18 interested in our technology, so I also negotiated what  
19 we call licensing out of technology.

20 So --

21 Q. All right. So when you say you negotiated --

22 A. Yes.

23 Q. -- you were involved personally --

24 A. Yes.

25 Q. -- in the negotiations?

1           A.     I was the chief financial officer of the  
2 company.

3           Q.     All right.

4           A.     So I was responsible for negotiating those  
5 licenses.

6                     After I left Advance Energy Supply Company, I  
7 then went -- went to work for a company called -- a big  
8 accounting firm called PriceWaterhouse. Today it's  
9 PriceWaterhouseCoopers. They're the people that do the  
10 Oscars every year.

11                    And over time, I became a partner, and I was a  
12 partner there for 10 of the 17 years I was there. And I  
13 headed up, at one point, their intellectual property  
14 consulting practice worldwide before I left. And during  
15 that entire time period, I continued to work on  
16 negotiating licenses for clients.

17                    Now, part of my work involves doing things  
18 like I'm doing today, coming into a courtroom and  
19 testifying about patent damages.

20                    Another part of my work has been and continues  
21 to be with where I value intellectual property, patents,  
22 trademarks, trade secrets, I value them for clients in a  
23 non-litigation environment. I also negotiate technology  
24 licenses.

25                    So I either actually represent a client in

1 direct negotiations, or I will do some background  
2 analysis for them regarding technology.

3           And I personally licensed over 200 -- I've  
4 also -- I've personally negotiated over 200 licenses  
5 during my career. And I actually have two or three  
6 active projects as I speak, back in Houston for one  
7 client in Pennsylvania and a major university here in  
8 Texas where I'm actually representing them in license  
9 negotiations.

10           Q. All right, sir. Thank you.

11           And just to close the loop on -- on the slide  
12 that's in front of the jury, you have United Nations  
13 expert on intellectual property. Just briefly, those  
14 last three.

15           A. Sure. Well, first of all, I'm also a  
16 certified public accountant. I've been licensed in the  
17 State of Texas since 1981 as a CPA.

18           The United Nations project was where I was  
19 invited to be on what was called a group of experts on  
20 intellectual property. They appointed various lawyers  
21 in the United States, some lawyers in Europe, and I was  
22 invited to be on this team of people.

23           What happened is, when the Soviet Union  
24 collapsed and the economies in Eastern Europe, countries  
25 like Poland, Romania, Hungary, their economies were a

1 wreck, and their living -- life -- living standards and  
2 the wages were way behind what they were in the rest of  
3 Europe.

4           And what the United Nations was trying to do  
5 with the United States, Canada, Europe, and Japan, they  
6 were trying to educate the -- these former Soviet  
7 countries that if they wanted to develop strong, robust  
8 capital economies, capitalistic economies, and increase  
9 or improve the standard of living of their citizens,  
10 they needed to pass strong intellectual property  
11 legislation and then have a strong judiciary and legal  
12 system to enforce those intellectual property rights,  
13 because, otherwise, people would not invest their  
14 technology in those kind of countries.

15           And so that's what -- that project lasted for  
16 several years.

17           Q.    Great. And then you got -- you've lectured on  
18 intellectual property?

19           A.    Yes.

20           Q.    You've authored articles on intellectual  
21 property --

22           A.    Yes.

23           Q.    -- and licensing and valuation --

24           A.    Right.

25           Q.    -- is that right?

1           A.     Yes.

2           Q.     And then you're on the editorial board of  
3 Managing Intellectual Property --

4           A.     Yes.

5           Q.     -- which is a periodical; is that right?

6           A.     It's a monthly periodical -- a bi-monthly  
7 periodical that's published out of London, England.  
8 It's a worldwide publication. It's popular in the  
9 United States, in Europe, and Asia.

10                   I've been on their editorial board for a  
11 number of years. I'm sorry. I'm been on their  
12 editorial board for a number of years. And what that  
13 means is, I am periodically asked to review articles  
14 before they're submitted for publication to the  
15 publisher.

16                   And in addition, I've actually written  
17 articles for that publication.

18                   Also, as a guest lecturer, I've been invited  
19 to speak in a variety of intellectual property  
20 conferences. I was supposed to be on a program last  
21 week, in fact, at The University of Texas last Thursday  
22 in Austin on intellectual property.

23                   And I teach a course every fall and every  
24 spring on intellectual property at the University of  
25 Houston Law School where I'm a guest lecturer.

1 Q. Great. Thank you.

2 Now, what were you asked to do in this case?

3 A. My role was to determine the amount of  
4 royalties, if any, that would be due and owing RTI if I  
5 were to assume that BD had infringed the three Shaw  
6 patents and that the Shaw patents were valid.

7 Q. Can you give us an overview of your testimony?

8 A. Sure. Well, as part of my investigation --  
9 and I've got it here on the slide show -- you know, I  
10 learned -- whoops. Let me see if I've got this. Yeah.  
11 I learned through my investigation -- whoops. Did I do  
12 that? Can't give me technology. Sorry.

13 Q. Is that a clicker, or is that a --

14 A. I put my finger on the wrong part.

15 Q. Better not use that, because we'll be all over  
16 the place.

17 A. No. I know where the clicker is now. Thanks.

18 Q. Okay.

19 A. I learned through my investigation and my  
20 reading of the expert reports of RTI's technical  
21 experts, Mr. Sheehan, who testified here, Dr. --  
22 Dr. Hyman, Mr. Minkin.

23 I learned -- and through my interviews -- I  
24 interviewed Mr. Sheehan several times, and I interviewed  
25 Dr. Hyman as well on at least one or two occasions --

1 that the Shaw patents are considered to be very  
2 important and valuable patents.

3 I also learned that RTI's safety syringes are  
4 all retractable and nonreusable. In other words, the  
5 VanishPoint, which is the only retractable product --  
6 automated retractable product made by RTI, is a  
7 retractable product, and it's not reusable.

8 That's not the case for BD. BD has a variety  
9 of syringes, not all of which meet the test of being  
10 automated retractable and being nonreusable.

11 I also -- from my investigation, from an  
12 overview perspective, it's my view that RTI would be  
13 entitled to royalty damages based on BD's projected  
14 sales of their automatic -- automated retractable  
15 syringes back in 2000 when they first are assumed to  
16 have infringed the Shaw patents.

17 And at that time, both BD and RTI had  
18 projections back in the year 2000 that they were going  
19 to enjoy high sales and high profitability on the sales  
20 of these automated retractable syringes.

21 Q. Now, Mr. Bratic, are you guided in your work  
22 by federal law?

23 A. I am.

24 Q. All right.

25 MR. BOWLES: Let's go to the next slide.

1 Let's go to the next slide.

2 A. Now, this slide is from -- taken from the  
3 United States patent statute. It's not me saying this;  
4 this is from the federal statute.

5 And it says that upon finding for the  
6 claimant, which would be the patentee, the Court shall  
7 award the claimant damages adequate to compensate for  
8 infringement -- and I've underlined this -- but in no  
9 event less than a reasonable royalty for the use made of  
10 the invention by the infringer, together with interest  
11 and costs fixed by the Court.

12 So what I've done is, I've looked at what the  
13 amount of reasonable royalties would be that would be  
14 due and owing RTI by BD.

15 Q. (By Mr. Bowles) All right. Mr. Bratic, what  
16 did you do to fulfill your obligations under your  
17 assignment?

18 A. Well, I did a number of things, but I prepared  
19 a slide that summarizes, like highlights of what I did.

20 Well, the first thing I did is, I looked at  
21 many, many RTI and BD documents. And I should preface  
22 that by saying I read and reviewed the various legal  
23 pleadings in this case before I launched into looking at  
24 these business documents.

25 But I've reviewed a lot of business documents.

1 I just mentioned that both companies had financial  
2 projections. I've looked at the companies' actual  
3 financial statements over time.

4 I've looked at product-specific information.  
5 I've seen a lot of memos. The jury was shown a number  
6 of memos during the -- during the deposition clips that  
7 were played this morning.

8 So I've reviewed many, many internal BD and  
9 RTI documents like the ones that were shown this  
10 morning. And that's just an overview of the kind of  
11 documents that I looked at.

12 I analyzed various publications, industry  
13 publications, that were produced from third parties  
14 about the syringe and safety syringe industry, the  
15 medical devices industry, as it pertains to health and  
16 safety of -- with respect to syringes and needles. I  
17 read various depositions of witnesses that were taken  
18 in -- in this case.

19 I toured RTI's Little Elm facility. I went up  
20 to Little Elm. I met with Mr. Shaw, and I met  
21 Ms. Duesman. I interviewed them. I actually went into  
22 the plant with the plant manager, toured the facility  
23 with the chief financial officer.

24 I went through the company's books and records  
25 with the chief financial officer. And I actually looked

1 at the manufacturing equipment, learned how the  
2 equipment was made, watched the little components being  
3 assembled and made into syringes and watched them being  
4 packaged and then put in the warehouse and the like.

5 I interviewed -- as I said, I also interviewed  
6 RTI's technical experts, both Mr. Sheehan and Mr. -- Dr.  
7 Hyman on several occasions. I read their expert  
8 reports. And I read and analyzed reports issued by BD's  
9 damage expert. BD has a damage expert like RTI has me.  
10 And also I filed an extensive expert report in this --  
11 in this lawsuit back in April of 2009.

12 Q. Now, did you do any economic analysis?

13 A. Yes. Part --

14 Q. -- in conjunction with your procedures  
15 performed?

16 A. What I did in conjunction with everything I  
17 looked at, I did an economic, financial, and accounting  
18 analysis of all these business records and business --  
19 and financial documents.

20 Q. All right. And then I think you prepared a  
21 glossary, sort of a glossary of terms?

22 A. Yes.

23 Q. I think we have that up there.

24 A. We do.

25 Q. Would you describe for the jury what -- and I

1 mentioned to the jury the term reasonable royalty.

2 A. Right.

3 Q. You've got it on there. Why don't you explain  
4 to the jury how you, as an expert, determine a  
5 reasonable royalty.

6 A. Right. Well, I'm going to give you a preview  
7 of some of the doc -- some of the terms I'm going to use  
8 throughout my discussion.

9 Under the concept of reasonable royalties, I'm  
10 required to look at a case that's mentioned down here,  
11 the Georgia-Pacific case, and I'll talk about the  
12 factors in a minute.

13 Q. You mean Georgia-Pacific factors right there?

14 A. Yes. But there was an actual lawsuit from the  
15 early 1970s, a patent lawsuit, called Georgia-Pacific  
16 versus U.S. Plywood, and it involved a patent  
17 infringement case involving plywood of all things. But  
18 in that case, they -- one of the big issues in that case  
19 was, what was a reasonable royalty.

20 In that case, the Court said that you're to  
21 assume that there would be a hypothetical negotiation.  
22 And I know during voir dire and opening arguments, there  
23 were discussions with the jury about this hypothetical  
24 negotiation.

25 It's a fiction. It never happened. Both RTI

1 and BD are in this courtroom today because they never  
2 had a license. They never agreed on a license.

3           The Court, in the Georgia-Pacific case, said  
4 you have to assume that BD and RTI would have gone to  
5 and sat at a hypothetical negotiation back at the time  
6 that RTI -- BD is assumed to have first infringed the  
7 Shaw patents, which in this case, from my analysis,  
8 indicates it would have been on or around May 2000,  
9 about 10 years ago.

10           So we're going to be going in a time machine  
11 from today back to the time period of May 2000 to look  
12 at and consider what that hypothetical negotiation would  
13 have been like.

14           Now --

15           Q. Is that what you mean when you say not real  
16 world?

17           A. Yes. It's not real world. It never happened.  
18 The Court, in the Georgia-Pacific case, says you're to  
19 assume -- that damages experts are to assume that the  
20 parties would have gone to a hypothetical negotiation,  
21 they would have sat down, and they would have  
22 hypothetically negotiated a hypothetical license in  
23 order for the Defendant or the infringer to have the  
24 right to sell products under a license from RTI.

25           Now, another thing that's up here is, there's

1 a typical formula, which is you look at a royalty rate,  
2 and you look at a royalty base.

3 Now, Mr. Carroll, I think, talked about --  
4 early in the case, he talked about Farmer Brown and  
5 coming onto Farmer Brown's land and wanting to drill oil  
6 as an example.

7 Q. Is that why you have the word land right up  
8 there?

9 A. Right. So the royalty rate would be the rate  
10 you pay for the use of land. For example, if you own --  
11 if you were a renter in an apartment complex, you pay  
12 rent to the landlord for using their -- for coming onto  
13 their land and using their property.

14 That's the concept of the royalty rate. What  
15 you pay every month as the rent?

16 Now, the property you get to enjoy is the  
17 royalty base. In this case, the example I gave you was  
18 the land. In the illustration with respect to patent  
19 damages, the royalty base would be the accused products,  
20 the Integra products at issue in this case.

21 And so you take a look and do an analysis to  
22 determine what the royalty rate is under the  
23 Georgia-Pacific factors, you apply that to the royalty  
24 rate -- base -- excuse me -- and you come up with the  
25 amount of the reasonable royalty.

1           Q.     What do you -- what do you mean by -- am I  
2 getting ahead of you here?

3           A.     No. I was just going to say, the -- now, the  
4 Georgia-Pacific factors -- and I have a list of them  
5 I'll go through in a minute and explain to them.

6           Q.     Yeah. We're going to get to that in a minute.

7           A.     Right. And then there's the issue of  
8 design-around.

9                     Design-around is a very important issue in  
10 patent damages, particularly on the issue of reasonable  
11 royalties, because the design-around is the question of  
12 whether -- is whether or not the infringer could have  
13 avoided the claims of the patent and still have offered  
14 a product on the market with the same functionality that  
15 the patented product had or the infringing product had  
16 at the time of the first infringement.

17                    And if they could not have offered, come up  
18 with an alternative design, they have to take a license,  
19 and otherwise, they have to leave the market, and they  
20 can never put their product on the market.

21                    And a design-around is a very important issue  
22 in this case regarding reasonable royalty damages.

23           Q.     Then you have present value. What --

24           A.     Right.

25           Q.     -- do you mean by present value?

1           A.     Well, as I said, we're here in the year  
2 2000 -- 19 -- late 1999 -- 2009. We're going to go back  
3 in this time machine back to the year 2000.

4                 So we have to look at what the amount of the  
5 royalty that would have been paid expressed in the year  
6 2000 -- the year 2000 dollars, not the year 2009  
7 dollars.

8                 And then a simple example would be, if you had  
9 a dollar in the bank and you were getting 10 percent  
10 right on your money -- I know nobody gets that these  
11 days, but that's another hypothetical, just assume.

12                So you're at December 31st and you know that  
13 during the year of 19 -- 2009, you earn 10 percent on  
14 your dollar. So at the end of the year, December 31st,  
15 you had a dollar and ten cents in the bank.

16                And the question would be, well, if I had a  
17 dollar ten at the end of the year earning a 10 percent  
18 interest, how much money did I have at the beginning of  
19 the year?

20                And at the beginning of the year, you had a  
21 dollar. So what I -- so that's like shrinking the  
22 dollar ten back to a dollar.

23                So I've shrunk all these future dollars based  
24 on projections I'm going to show you, which were done in  
25 future years after the year 2000. I've shrunk them all

1 the way back to the year 2000 dollars. I have to do  
2 that to be fair to BD, so I don't inflate the amount of  
3 the reasonable royalty. And that's what I've done.

4 Q. Okay. Let's go to the bottom line first and  
5 then work backwards.

6 A. Sure.

7 Q. Do you have an opinion as to a reasonable  
8 royalty?

9 A. Yes, I do.

10 Q. And what is your opinion?

11 A. My opinion is the amount of reasonable royalty  
12 that would be due and owing and would have been paid by  
13 RTI -- by BD to RTI in or about May 2000 would have been  
14 \$72,600,000 for a right for BD to practice the -- for  
15 the right for BD to practice the Shaw patents through  
16 the time of trial.

17 Q. All right. For about 10 years?

18 A. For about 10 years.

19 Q. All right. Now, tell us how you arrived at  
20 that number.

21 A. Well, what I did is I used the formula we  
22 talked about earlier, the royalty rate times the royalty  
23 base to get the \$72,600,000. But I also used those  
24 Georgia-Pacific factors that I, as an expert on damages,  
25 am required to use by the Court.

1           And I have a chart here listing out those --  
2 those 15 factors. There they are. So --

3           Q.    And those are straight out of the  
4 Georgia-Pacific case?

5           A.    They're straight out of the case. It's what  
6 the Judge said and wrote down. So this is kind of like  
7 the Judge's clay tablet.

8           Q.    We're not going to go through all of those --

9           A.    No.

10          Q.    -- but I think you've picked out some that you  
11 think are particularly relevant.

12          A.    As an example -- I apologize for talking over  
13 you.

14                As an example, look at GP Factor No. 5. One  
15 of the things you have to consider is the competitive  
16 nature of the parties. Are they just an inventor,  
17 somebody who has an idea but has no way to get that  
18 product to market or that idea to market, and therefore,  
19 has to rely on some company to take that idea and  
20 convert it into a product -- that's a very different  
21 situation than if you have a company that actually is  
22 making the product, like RTI, and competing with a  
23 company like BD that also makes the product or has the  
24 ability to make that product.

25          Q.    And why is that significant?

1           A.     Well, because what happens is -- and I'll get  
2 into it a little later -- if you're -- if you're a  
3 patentee and you give a major competitor a license to  
4 your products, you're giving them a razor blade to slice  
5 your throat. You're giving them the opportunity to go  
6 in the market and undercut your sales.

7                     And no willing licensor would voluntarily  
8 agree to license a big competitor and have them slit  
9 their throat and have them leave the market or be  
10 severely crippled, as Mr. Shaw testified to.

11                    Now, other things to look at is, for example,  
12 the established profitability and the commercial success  
13 for the product.

14                    As of May of 2000, the time of the  
15 hypothetical negotiation, BD and RTI -- as I will  
16 explain, BD would have known that RTI's product was on  
17 the market for several years and that RDI -- RTI was  
18 enjoying sales and growing sales.

19                    You saw from the -- the witness video clips  
20 this morning that they were talking about RTI getting a  
21 lot of traction in the marketplace. Consumers were  
22 attracted to that product and so forth. So that was  
23 something we'll talk about that would have been known.

24                    Another thing to consider, for example, is the  
25 utility -- No. 9, the utility and advantages of the

1 invention. What are the benefits you, as an infringer  
2 or licensee, would enjoy from practicing the Shaw  
3 patents? That's also something that needs to be  
4 considered.

5 The nature of the patented invention and the  
6 benefits to those who use those patents, that's another  
7 thing that's to be considered.

8 The extent of the infringer's use. What does  
9 the infringer intend to do with those products? And  
10 that's something we'll take a look at.

11 Another thing is, you'll consider the opinion  
12 of experts. I relied on technical experts in this case,  
13 Mr. Sheehan, Dr. Hyman. I relied on their expertise and  
14 their evaluation of the Shaw technology.

15 Q. Okay. We're going to -- we're going to get  
16 together on this in a minute, and I apologize for  
17 talking over you.

18 A. Yeah.

19 Q. The last one is hypothetical negotiation.

20 A. Right.

21 Q. Do you see that?

22 A. Yes.

23 Q. And so that was part of the teaching of the  
24 Georgia-Pacific case; is that right?

25 A. Correct.

1 Q. All right.

2 MR. BOWLES: Now, let's go to the next  
3 slide, please.

4 A. And just to save -- yeah.

5 That Georgia-Pacific case, what it says is you  
6 take those 14 factors, analyze them, determine how they  
7 relate to the particular facts of this case, for  
8 example, and then you put all that into the hypothetical  
9 negotiation.

10 Now, here we have an example of what would  
11 have been a hypothetical negotiation. You would have  
12 RTI on the one hand and BD on the other hand sitting  
13 down in or about May 2000 to negotiate a license for the  
14 Shaw patents. And --

15 Q. (By Mr. Bowles) And --

16 A. I'm sorry.

17 Q. That's all right. Go ahead.

18 A. No. I was just going to say, as it says here,  
19 what's really important to understand is, both parties,  
20 BD and RTI, know and are asked to assume that the Shaw  
21 patents are valid and that BD has infringed them.

22 If it wants to make a product of putting an  
23 automatic retractable syringe on the market, then it  
24 would be infringing those products, and they have to  
25 take a license.

1 Q. Any -- any secrets?

2 A. No. That's another thing that's very  
3 important is, all the cards are on the table. This is  
4 not -- this hypothetical negotiation is not like a poker  
5 game where everybody kind of takes their deck of cards  
6 and they hold them up like this (demonstrating) and  
7 neither side knows what's -- what their cards are.

8 In reality -- I'm saying reality -- in the  
9 hypothetical reality of the Georgia-Pacific case, it's  
10 assumed that all the information that's known and  
11 knowable to the parties as of May of 2000 is on the  
12 table, and both BD and RTI have full access to that  
13 information.

14 So it's no surprises and no secrets.

15 Q. All right. Now, let's talk about the  
16 hypothetical negotiation from BD's standpoint.

17 A. Right.

18 Q. Because you have to put yourself in BD's  
19 position, right?

20 A. Yes.

21 Q. As well as RTI's.

22 A. I do.

23 Q. Okay. So the next slide has BD's negotiating  
24 position. Do you see that?

25 A. I do.

1 Q. Okay. Could you describe that for the jury.

2 A. Right. What I've done is just put kind of a  
3 compressed timetable together of what would have been  
4 known to RTI and to BD leading up to the hypothetical  
5 negotiation in the year 2000 for a license for the Shaw  
6 patents.

7 Now, you saw from some of the earlier  
8 slides -- and some of the documents I'm going to show  
9 you are taken from those earlier video clips you saw  
10 this morning.

11 But the substance of what happens here is that  
12 as of May 1995, BD had decided it wasn't going to pursue  
13 an automated retractable product, because they couldn't  
14 really get one to work. So they decided they weren't  
15 going to pursue it.

16 As you fast-forward, things start happening in  
17 the marketplace. One, B -- RTI comes on the marketplace  
18 place with a retractable syringe, and it starts getting  
19 a lot of attention.

20 Also, you have needlestick legislation that's  
21 being passed. California passes legislation. OSHA puts  
22 in all these mandates requiring -- requiring needlestick  
23 prevention techniques and practices in hospitals and  
24 facilities.

25 And then we also have now BD coming back and

1 taking a fresh look at what's going on with automated  
2 retractable syringes in the marketplace and then BD  
3 engaging in a -- in a crash project to get out a  
4 automated retractable syringe, because they don't have  
5 one.

6 And all of this information would have been  
7 known to both BD and to RTI at the time of the  
8 hypothetical negotiation.

9 Q. All right. Let's work through the --

10 A. Sure.

11 Q. -- through this slide in a little more detail.

12 A. Sure.

13 Q. Let's go to the first one.

14 A. Okay.

15 Q. May 1995, BD gives up on making a retractable  
16 syringe.

17 What's your basis for that?

18 A. Oh, there's BD -- an internal BD document,  
19 which is this document here.

20 THE WITNESS: If you can blow that up.

21 A. This document from May 1995 says: Becton  
22 Dickinson engineers worked very hard trying to make this  
23 idea work for us -- this is the automated retractable  
24 syringe -- but we could never get a retractable needle  
25 syringe to perform to standards we feel meet our

1 customers' legitimate needs and expectations.

2 Q. (By Mr. Bowles) And what is the significance  
3 of that to you in looking at BD's negotiating position?

4 A. Well, it just means that RTI and BD would have  
5 known that by 1995, BD had kind of decided not to pursue  
6 the idea of an automated retractable syringe.

7 But later on, between 1995 and the time of the  
8 hypothetical negotiation, BD changes its mind and starts  
9 aggressively pursuing the idea of a retractable  
10 needle -- syringe. Excuse me.

11 Q. All right.

12 MR. BOWLES: Let's go to the next slide,  
13 Braden.

14 A. Right. Now, we know in 1997, in February of  
15 1997, that RTI's VanishPoint hits the market. It's been  
16 approved by the FDA. It's out in the market. It's  
17 being distributed and is being marketed and sold by RTI.

18 Q. (By Mr. Bowles) Then about two months later --

19 A. Yes.

20 Q. -- you have BD places low value on safety.  
21 What are you -- what are you basing that on?

22 A. It's a BD document. It was actually shown to  
23 the jury this morning. This is that Safety Day document  
24 that the jury saw this morning.

25 And you can see from the highlight there in

1 that second paragraph, it says -- at the very end, it  
2 says: Current thinking is that such a product cannot be  
3 created, such a product being an automated retractable.

4 So it's still the current thinking, as of  
5 April 1997, right after BD comes on the market.

6 Q. You mean RTI comes on the market?

7 A. I mean right after RTI came on the market.

8 They also say: Safety has low relevance and value to  
9 both economic buyer and clinical user. So they're not  
10 placing a lot of value on this kind of technology.

11 Q. So what does that tell you about BD's  
12 perception of the market in April 1997?

13 A. They didn't think there was much of a market  
14 there at that time that they were willing to pursue or  
15 invest in.

16 Q. All right. Let's go to the next line item.

17 A. Yeah. The next thing that happens is,  
18 September of 1998, California is the first state to pass  
19 needlestick safety legislation, which I know has been  
20 discussed before.

21 And then right after that --

22 Q. Well, wait a minute.

23 A. Yes.

24 Q. What's the significance of that legislation?

25 A. Well, as you heard from some of the testimony

1 this morning in the video clips, that that started  
2 giving a lot of momentum to manufacturers like BD and  
3 RTI, because people were starting to place a lot of  
4 emphasis on safety and needlestick prevention.

5 Q. For the market to convert from --

6 A. To --

7 Q. -- conventional syringes to safety syringes?

8 A. Correct.

9 Q. All right. Then I think your next line is,  
10 December 1998, VanishPoint syringe well received?

11 A. Right.

12 Q. What do you base that on?

13 A. This is an internal BD document where they're  
14 now, a year and a half after VanishPoint -- I mean  
15 after -- RTI's VanishPoint is on the market, BD's taking  
16 a look at how VanishPoint has done, because they've had  
17 an opportunity to watch it in the marketplace for a year  
18 and a half.

19 So this is a BD document saying that -- they  
20 talk about a bigger market, meaning the market for  
21 safety syringes is expanding and allows more than one  
22 platform.

23 They also say -- and they're taking an  
24 aggressive look at retractables. RTI has proven that  
25 concept is inherently attractive to customers, that

1 concept being VanishPoint, because that's the only  
2 product they were making.

3 Q. And this is a BD document?

4 A. Correct.

5 Q. All right. Then you have next, March to April  
6 1999, BD's customers demand retractable syringe.

7 A. That's correct.

8 So we have BD's own customers from internal BD  
9 documents -- this is, again, another document the jury  
10 saw this morning -- where BD's customers -- they're  
11 talking about their retractable positioning statement.

12 What that means is, where are we going to  
13 place this product, this retractable syringe, in the  
14 marketplace?

15 And they're saying customers are excited about  
16 retractable syringes. Customers are asking BD about it.  
17 That means BD customers are asking BD about the  
18 retractable syringe.

19 And some customers are equating retractables  
20 with superior technology. And BD doesn't have a product  
21 at this point.

22 Q. All right. And then I think we have another  
23 document.

24 A. Yes.

25 Q. Tell us about that.

1           A.     Well, this is another document in that same  
2 timeframe -- it's April of 1999 -- where BD's customers  
3 are demanding and asking for retractable technology.

4                     And it says here: In the last year, BD has  
5 aggressively stated -- started re-evaluating the merits  
6 of a retractable needle technology for skin injections  
7 as new designs have surfaced that deliver considerable  
8 improvements over two-handed multi-step retractable  
9 syringes.

10                    So they're now --

11           Q.     Reviewed and rejected in the mid-1990s?

12           A.     Correct. So they're now getting back into the  
13 market to aggressively re-evaluate what to do with an  
14 automated retractable syringe, because they don't have  
15 one.

16           Q.     All right. Let's go to the next two line  
17 items.

18           A.     Yes. Now, the next two line items -- well,  
19 the next line item is, of course, in June 1999, BD buys  
20 Saf-T-Med's retractable syringe technology.

21                    They pay \$17 million to tie up and buy up  
22 Saf-T-Med's technology knowing that they're going to  
23 have to invest a lot more -- a lot more money into  
24 taking whatever they bought from Saf-T-Med and  
25 ultimately turning it into a saleable product.

1           Now, by November 1999, OSHA comes out with its  
2 regulations demanding that hospitals use safety  
3 syringes.

4           Q.     And what's the significance of that to you?

5           A.     Well, that's just part of this sea change that  
6 was going on in the industry between 1995 and the time  
7 of the hypothetical negotiation, where this -- RTI comes  
8 out with a retractable automated product, the  
9 VanishPoint, and the industry starts migrating to -- and  
10 everybody's awareness of needlestick injuries and  
11 needlestick prevention being solved with an automated  
12 retractable syringe.

13          Q.     All right.

14                   MR. BOWLES: Let's go to the next one,  
15 Braden. Thank you.

16          A.     Now, the next one --

17          Q.     (By Mr. Bowles) We have November 1999, BD's  
18 marketing tests show retractable syringe is strongest  
19 product platform.

20          A.     Right.

21          Q.     That's -- that's the document we saw in the  
22 videos this morning --

23          A.     Correct.

24          Q.     -- is that right?

25          A.     Correct.

1 Q. And what's the significance of that document  
2 to you?

3 A. Well, the significance of -- by November 1999,  
4 just a few months before the hypothetical negotiation,  
5 both BD and RTI would have known about this document and  
6 that BD had recognized that it would be -- its strongest  
7 platform, it would be the retractable -- automated  
8 retractable product would be their strongest platform  
9 and that they, BD, had a window of opportunity.

10 And a window of opportunity is a narrow  
11 window, meaning from the business stance of -- window of  
12 opportunity means there's a time period in which you got  
13 to jump through that window to get in the market if  
14 you're going to get some traction with your product;  
15 otherwise, you're going to have a lot of problems in  
16 getting attention in the marketplace.

17 So they recognized there was a window of  
18 opportunity for this being its number one strongest  
19 platform.

20 Q. All right. And then there's another memo in  
21 November of 1999. I think we saw that this morning --

22 A. Yes.

23 Q. -- with Ms. Machan.

24 A. Yes.

25 Q. Tell us the significance of that to you --

1 A. Well --

2 Q. -- in assessing the negotiating position of  
3 the parties.

4 A. Right. Now, again, this is leading up to the  
5 hypothetical negotiation in May of 2000, so here you  
6 have in November of 1999, BD's internal documents, which  
7 would have been known to RTI and BD, because they would  
8 have shared on this. Remember, cards are up on the  
9 table.

10 They would have known -- RTI and BD would have  
11 known that BD was engaged in what they call the  
12 Manhattan project, which was a crash project to get out  
13 an automated retractable syringe in the marketplace as  
14 early as possible -- or I should say as soon as possible  
15 and that they are willing to throw resources after that  
16 problem.

17 Q. And the Manhattan project?

18 A. The Manhattan project, as the witness  
19 testified in the video clip, was, of course, the -- is  
20 the euphemism or the term used for the atomic A-bomb  
21 project that the United States Government engaged in  
22 during World War II to come up with a -- be the first  
23 ones to come out with an atomic bomb before the Germans  
24 and before the Japanese in World War II.

25 Q. Okay. And then in January of 2000, you have

1 retractable syringe is BD's dominant platform long term.

2       A.    Yes.  And this is, again, from another -- this  
3 is -- on the eve of the hypothetical negotiation, this  
4 is an internal BD document that says -- they're talking  
5 about this is clearly our dominant platform long term,  
6 talking about the spring-based needle or the -- what  
7 became the Integra.

8       Q.    All right.

9               MR. BOWLES:  Then, Braden, I think the  
10 last line item is the -- second to the last line item...

11       Q.    (By Mr. Bowles) Go ahead.

12       A.    What happens is, with all of this and BD's  
13 commitment to this dominant long-term platform right  
14 before the hypothetical negotiation, BD committed to  
15 spend over \$66 million more to make a retractable  
16 needle -- a retractable syringe.

17               In other words, they were willing to take that  
18 \$17 million they paid for Saf-T-Med -- they knew that  
19 wasn't enough.  They were going to leverage off the  
20 Saf-T-Med acquisition of 17 million and were committing  
21 to spend at least another \$66 million on this Manhattan  
22 project to get this dominant platform going.

23               And this is all leading up to the hypothetical  
24 negotiation.  And all this information on the screen  
25 here would have been known both by RTI and BD at the

1 hypothetical negotiation.

2 Q. Then the last one is the national needlestick  
3 safety legislation signed by President Clinton, right?

4 A. Correct.

5 Q. Okay. So let's go back to the hypothetical  
6 negotiation.

7 THE COURT: I think this is probably a  
8 convenient breaking point --

9 MR. BOWLES: Yes, sir.

10 THE COURT: -- for our morning break.  
11 We'll be in recess 15 to 20 minutes.

12 COURT SECURITY OFFICER: All rise.

13 (Jury out.)

14 (Recess.)

15 COURT SECURITY OFFICER: All rise.

16 (Jury in.)

17 THE COURT: Please be seated.

18 You may continue.

19 MR. BOWLES: Thank you, Your Honor.

20 May it please the Court.

21 Q. (By Mr. Bowles) Mr. Bratic, when we took our  
22 break, I think we had just finished the BD's negotiating  
23 position --

24 MR. BOWLES: Braden, can we go to the  
25 next slide?

1 Q. (By Mr. Bowles) -- which would be that.  
2 That would, again, represent the hypothetical --  
3 hypothetical negotiation, right?

4 A. Right. And the reason I put this slide here  
5 in my presentation is because all of the information we  
6 just talked about on the timetable would have been on  
7 the table and would have been known by BD and RTI --

8 Q. All right.

9 A. -- at the hypothetical negotiation.

10 Q. Okay. Let's go to the next slide, which I  
11 think you start to go through the Georgia-Pacific  
12 factors in a little more detail; is that right?

13 A. Yes.

14 Q. Okay.

15 A. So these are additional considerations under  
16 Georgia-Pacific. So what I've done is I've talked about  
17 them, and I'm going to talk about each of these subject  
18 matters in a little more detail, but kind of this is a  
19 preview on this section.

20 So one of the things I will talk about is that  
21 the Shaw patents are considered to be valuable and  
22 important.

23 Q. Then you have GP 8, 9, and 10.

24 A. Right.

25 Q. Tell us what that means.

1           A.     Well, those are the GP factors.  There's 15  
2 factors.

3           Q.     Georgia-Pacific, right?

4           A.     Right.  Georgia-Pacific.  That's Factor 8, 9,  
5 and 10 that relate to that subject.

6                     Then we'll talk about the fact that RTI and BD  
7 were competitors.  That's Georgia-Pacific Factor 5.

8                     We'll talk a little bit about BD's projections  
9 in that timeframe leading up to the hypothetical  
10 negotiation.  That would be covered by Georgia-Pacific  
11 Factor 11.

12                    BVS, which was a company retained by RTI that  
13 Mr. Shaw talked about, they did some projections  
14 regarding VanishPoint in that timeframe.

15                    Then Integra, BD made some projections and  
16 analysis on how much more profitable they expected  
17 Integra to be compared to some of their other  
18 conventional syringes, like SafetyGlide and Safety-Lok.

19           Q.     And when did they make that analysis for -- or  
20 conclude those projections?

21           A.     That would have been in February of -- around  
22 February of 2000 before the hypothetical negotiation.

23                    And then finally, you'll see some discussion I  
24 have about the reasonable royalty rate being 20 percent  
25 in my opinion.

1 Q. All right. And so we're going for the rate  
2 now, correct?

3 A. Correct.

4 Q. This is your rate analysis --

5 A. Correct.

6 Q. -- to determine what is a reasonable rate, and  
7 then you apply that to the base?

8 A. Correct.

9 Q. Okay. Go ahead.

10 A. Well, I have another slide now --

11 Q. All right.

12 A. -- if we can turn to it.

13 Q. Is that okay?

14 A. Yeah. This is perfect.

15 Q. You want to go back to the other one?

16 A. No. This is the slide.

17 Q. Let's go back.

18 A. Except in the time machine, going back to May  
19 of 2000.

20 Q. All right. Shaw patents are valuable and  
21 important.

22 A. Right. Now, what I learned from my  
23 discussions or my interviews with Mr. Sheehan was that  
24 the Shaw patents that are -- the three Shaw patents at  
25 issue in this case are considered to be a significant

1 advance over old modes or less safe devices.

2           And he considered it break-through technology.  
3 And I was here in the courtroom when he testified that  
4 he would have given Mr. Shaw an A plus for  
5 innovativeness in his inventions had he been his  
6 student.

7           Mr. Sheehan also characterized these as  
8 watershed patents, meaning it's something really  
9 different and transformative. It's a break-through.  
10 He also talked -- he being Mr. Sheehan. What I learned  
11 from him is that there are numerous benefits somebody  
12 who practices these patents gets to enjoy: The ease of  
13 use; requiring very little training; minimizing risk to  
14 the healthcare worker, which, of course, is a big issue;  
15 prevent -- prevention of cross-contamination; and then  
16 reducing disposal and other costs, which are big costs  
17 to hospitals and clinics, how to deal with all these  
18 needlestick -- needles, disposed needles, and where to  
19 -- where to get rid of them.

20           Now, based on my discussions and reading of  
21 Dr. Hyman's expert report and my interviews with  
22 Dr. Hyman, I learned the Shaw patents represent  
23 considerable inventiveness in terms of what they teach.  
24 And also based on my discussions with -- and my  
25 interviews with Ms. Duesman --

1 Q. Were you here for her direct testimony?

2 A. I was.

3 Q. All right. Go ahead.

4 A. And then I -- you know, one of the things I  
5 learned from her is that exposed needles, used needles,  
6 with conventional guards are very dangerous.

7 And so that is a summary of why, under  
8 Georgia-Pacific 9, 10, 11, and 14, the Shaw patents are  
9 valuable and this would have been known to the parties  
10 at the time of the hypothetical negotiation.

11 Q. Then on the next page, you address GP Factor  
12 or Georgia-Pacific Factor 11 and Factor 14. The Shaw  
13 patents were very important to BD's business.

14 A. Correct.

15 Q. All right. Explain that to us.

16 A. And the rule -- one of the reasons they were  
17 very important to BD's business is because, as  
18 Mr. Sheehan has told me, it would be extremely  
19 difficult, if not impossible, to design-around the Shaw  
20 patents.

21 And it's important that you understand, it's  
22 not just a question of could I come up with another  
23 widget. That's not the issue.

24 When you have an infringing product with the  
25 features and functionality that that product has, you

1 have to be able to say that I could go out and design a  
2 completely different product that has the same  
3 characteristics, the same functionality as the  
4 infringing Integra product and not read on the claims of  
5 the Shaw patents.

6 And according to Mr. Sheehan, it would be  
7 extremely difficult, if not impossible, to design-around  
8 the Shaw patents.

9 And that would be something that would be  
10 something that would be really important to know at the  
11 hypothetical negotiation, and that is something that  
12 would definitely favor RTI in giving them more of a  
13 bargaining position at the hypothetical negotiation.

14 Q. Okay.

15 MR. BOWLES: Let's go to the next bullet  
16 line.

17 A. Now, BD had a hole in its product line. We  
18 just saw the fact that they decided they couldn't make  
19 or didn't want to make or didn't continue to want to  
20 make or emphasize an automated retractable product by  
21 May of 1995.

22 As of the hypothetical negotiation,  
23 fast-forward with the Manhattan project, and they're  
24 going fast-forward to come up with a retractable product  
25 because they don't have one on the market. That's the

1 hole in their product line.

2           So in order to fill that hole in their product  
3 line, they need a license from RTI to fill that hole.  
4 Because they can't design-around that -- the Shaw  
5 patents, they need a license in order to get that  
6 automated retractable needle on the market.

7           And that's why I have here: Without a license  
8 to the Shaw patents, BD would have to abandon the  
9 automated retractable product offer. They wouldn't be  
10 able to offer it at all. Even under the Manhattan  
11 project, they wouldn't be able to offer it at the end of  
12 the day.

13           Q.     (By Mr. Bowles) And again, at the hypothetical  
14 negotiation, both parties would understand that the  
15 Integra, the BD product, had infringed the Shaw patents,  
16 right?

17           A.     Not only that the Integra had infringed the  
18 BD -- the Shaw patents but that the Shaw patents were  
19 valid and had been infringed.

20           Q.     Very good.

21                     MR. BOWLES: Let's go to the next --

22           A.     And I should say that also that BD can enforce  
23 those patents against -- RTI can enforce the Shaw  
24 patents against B -- BD.

25           Q.     (By Mr. Bowles) Okay. Let's go to the next

1 one.

2 A. Now, RTI and BD would be considered  
3 competitors at the time of the hypothetical negotiation.

4 Now, we know that in May 2000, RTI was already  
5 on the market for a little over three years with  
6 VanishPoint.

7 What RTI and BD would know from these internal  
8 BD documents is that BD is on its Manhattan project in a  
9 quest to come out, as soon as possible, with an  
10 automatic -- automated retractable syringe, which would  
11 make them direct competitors.

12 And so that would have been known at the time  
13 of the hypothetical negotiation.

14 Now, VanishPoint was the lifeblood of RTI's  
15 business. It's accounted for 98 percent of RTI's -- all  
16 of its sales, to make a blood collector device, which is  
17 not covered by the Shaw patents.

18 Q. So why is that significant?

19 A. Because it's a one-product company. I think  
20 Mr. Shaw used the word, it's a one-trick pony. It's the  
21 only product they make. So they're highly focused on  
22 that product. It's the lifeblood of their sales and  
23 profitability.

24 You contrast that with BD.

25 THE WITNESS: If you'll go to the next

1 slide.

2           A.     BD sells a lot of products. It's a large  
3 international, diversified healthcare, medical products  
4 company. It has many products and many different types  
5 of syringes it offers. The automated retractable  
6 syringe, the Integra, would be one of many products it  
7 would offer.

8                     So there would be no guarantee to Mr. Shaw and  
9 RTI that BD would be as committed to its automated  
10 retractable project -- product and project in the same  
11 manner in which RTI was.

12                    And if RTI has one key product that it's  
13 offering at the time of the hypothetical negotiation,  
14 and it gives a license to BD, it's giving BD the razor  
15 blade to slit RTI's throat.

16           Q.     And actually, the next one, how does that fit  
17 into what you've just said?

18           A.     Well, at the time of the hypothetical  
19 negotiation, RTI and BD would have known that BD has 70  
20 percent market share for needles and syringes. And  
21 that's a huge market share.

22                    And that means that BD -- as Mr. Shaw  
23 explained yesterday, you've got a company that's been  
24 around for a hundred years like BD, has a lot of name  
25 recognition, has a lot of products on the market, a big

1 sophisticated sales force -- and you saw some of the  
2 very sophisticated people who were being videoed this  
3 morning.

4           These are the people who would be launching  
5 and promoting the Integra product. It would be very  
6 hard for a company like RTI in Little Elm, Texas, to  
7 compete with the kind of resources that BD could throw  
8 after a product like Integra. It wouldn't be able to  
9 compete on the same scale.

10           And RTI would have to take serious  
11 consideration to what the consequences were to the value  
12 of RTI at the time of infringement and what the  
13 long-term consequences to RTI's business would be to  
14 license a company that is 70 percent market share in the  
15 very business that RTI is trying to sell VanishPoint.

16           Q.     (By Mr. Bowles) Okay.

17           A.     Now --

18                   MR. BOWLES: Next slide.

19           A.     Next slide is, at the hypothetical  
20 negotiation, we know in the real world that RTI had not  
21 shared its internal financial statements with BD. We  
22 know that until this lawsuit.

23                   But at the time of the hypothetical  
24 negotiation, with all the cards on the table, BD and RTI  
25 would have known, because RTI would have given BD this

1 information -- BD would have known that RTI's sales were  
2 taking off with VanishPoint.

3           They were under a million dollars in '98, they  
4 were 3-1/2 million in 1999, and they were almost 10  
5 million in the year 2000.

6           And RTI and BD's internal documents, although  
7 they didn't have the numbers at the time, they knew that  
8 RTI was getting traction in the marketplace and that  
9 they were getting a lot of attention in the marketplace.

10           And RTI is going to sit there with BD saying,  
11 well, what's going to happen to my sales trend if I  
12 license you, BD, and give you a license when you've got  
13 70 percent of the market share? What's going to happen  
14 to me, RTI, and my business model?

15           And that becomes something that's to be  
16 considered.

17           Q.     (By Mr. Bowles) All right. Now, the next  
18 slide says: Profit premium of BD's Integra over other  
19 safety syringes.

20           Why is the profit premium projected for  
21 Integra significant to your analysis of the rate?

22           A.     Okay. What's important is that -- to know  
23 that this was, again -- prior to the hypothetical  
24 negotiation, BD did some projections.

25           THE WITNESS: Can we turn to the next

1 page real quick, the very next page real quick, and then  
2 we'll come back.

3 A. Okay. So this page is an internal BD  
4 document. It shows the pricing that BD was going to  
5 make on -- what they were planning on selling the  
6 Integra for, 30 cents, what they were going to sell the  
7 SafetyGlide for, which was 21 cents, and the Safety-Lok,  
8 which they were selling for at 16 cents.

9 So they knew they were going to get a big  
10 premium on Integra, because there was a premium being  
11 placed on safety.

12 And that's why they wanted to get into the  
13 market with the Integra product. Because there was a  
14 premium being made in the marketplace because of all the  
15 noise, all the legislation about safety and how  
16 important it was.

17 THE WITNESS: So go back to the earlier  
18 slide, if you will, please.

19 A. All right. So knowing that, what I'm doing  
20 here is just saying that when -- Integra, what its  
21 profit that -- we're looking at the gross profit of  
22 Integra compared to SafetyGlide, what they were actually  
23 getting on SafetyGlide.

24 BD knew -- and this would have been shared  
25 with RTI, at the time of the hypothetical negotiation --

1 that BD was expecting to generate 10 cents more in  
2 profits on Integra than they were making on SafetyGlide  
3 at the time.

4 They also know, looking over here on the  
5 right, that from a profit's perspective, BD was  
6 expecting to make almost 12 cents more per syringe than  
7 they were actually making on the Safety-Lok at the time.

8 So they knew this was going to -- and expected  
9 this to be a very profitable product for them, because  
10 they could charge a premium for it.

11 Now, what I did up here, because I'm going to  
12 show this in a later slide, is I just took that profit  
13 premium, 10 cents here, and if you divide roughly that  
14 10 cents, 9.7 cents -- if you just say it's 10 cents  
15 divided by 30 cents, you see that's 32 percent. That's  
16 32 percent of the sales price of Integra is reflected in  
17 that profit premium.

18 And as for that same analysis for Safety-Lok,  
19 that means that that 12-cent profit premium to a 30-cent  
20 price, that means that they were going to enjoy almost a  
21 40-cent profit premium on the price of Integra. And  
22 that would have been known to both parties.

23 Q. (By Mr. Bowles) Okay. And why is that  
24 significant to you?

25 A. Because it comes down to how much of their

1 profits, in their incremental profits that they were  
2 expecting to make, BD, on their Integra product, would  
3 they be willing to share and they could afford to share  
4 with RTI if they paid a royalty on those products.

5 Q. (By Mr. Bowles) Okay.

6 MR. BOWLES: Then do we have a -- Braden,  
7 we can skip the next one, because we've already been  
8 through that.

9 A. Yes.

10 Q. (By Mr. Bowles) Okay.

11 A. Okay. So here is a summary table of some of  
12 the financial data points or -- I considered.

13 Now, Mr. Shaw had testified -- I interviewed  
14 him, by the way, before trial, some time ago, before I  
15 filed my report, and what I learned there is exactly  
16 what I heard in the courtroom yesterday, that he  
17 learned -- when he was doing his investigation on how  
18 much he should license the Shaw patents to RTI for, that  
19 the research he obtained from his experts and his  
20 lawyers were that for medical devices, the royalty  
21 ranges ranged from 5 percent to 30 percent.

22 And he also said that the 5 percent was on the  
23 low end for not -- technology that wasn't novel or  
24 really innovative, whereas the higher royalty rate is in  
25 the upper 20, 30 percent range, would be for technology

1 that was break-through, that taught a lot.

2 Now, he decided, as he said, that he was going  
3 to license the company for 5 percent, because he wanted  
4 to give the company, as a brand new startup company, the  
5 opportunity to succeed.

6 So that's why he took the lower end, even  
7 though, of course, it was not his view that in any way  
8 the Shaw patents were not important.

9 But, in fact, over time, he's actually been  
10 paid almost 8 percent, over 7 percent effective royalty  
11 rate on his -- on his sales by RTI of VanishPoint, and  
12 that's because, as he mentioned, there are rebates and  
13 other things that get adjusted in there.

14 Now, I just showed you from the previous slide  
15 that the profit premium on Integra, compared to  
16 Safety-Lok, was almost 40 percent. As the SafetyGlide,  
17 the profit premium Integra would enjoy was 32 percent.  
18 And then Mr. Shaw also talked about the fact that RTI  
19 has done a license with a company called BTMB in China  
20 to make syringes in China under the Shaw patents that  
21 are covered in China, the international what we call  
22 counterparts to the U.S. patents that Mr. Shaw has.

23 And under that agreement, the effective  
24 royalty rate that Mr. -- that RTI is going to be paid is  
25 27 percent.

1           Now, what I did is, if you take the average of  
2 all these numbers, it comes out to about 25 percent. I  
3 concluded that the royalty rate, considering all the  
4 Georgia-Pacific factors and these data points, is that a  
5 fair and reasonable royalty rate for every single  
6 VanishPoint syringe -- syringe -- sorry -- should be 20  
7 percent based on this information and all the other  
8 Georgia-Pacific Factors and the other information I  
9 considered.

10           And to give you --

11           THE WITNESS: If you can go to the next  
12 slide.

13           A. Just to give you a perspective --

14           Q. (By Mr. Bowles) Sure.

15           A. -- here's the 20 percent.

16           THE WITNESS: Go to the next slide.

17           A. This is to help you put things in perspective.

18           If the Integra was expected to sell for 30  
19 cents, and in actuality, over time, it sold for more  
20 than that, the average was like 36 cents, the  
21 anticipated profit of Integra was 21 cents.

22           Now, if you take the 20 percent royalty, take  
23 20 percent of 30 cents, that means for every Integra  
24 syringe, RTI would be receiving a 6-cent royalty.

25           Well, if you have a gross profit here of 21

1 percent -- 21 cents, that means that the difference  
2 between that 21 cents and that 6 cents is 15 cents of  
3 profit that BD gets to keep after paying that 6 cents  
4 royalty.

5           So as I say here, BD, after paying that 20  
6 percent royalty, would still enjoy keeping 71 percent of  
7 its profits that they anticipated getting on Integra.

8           So it would be a win/win situation, because BD  
9 would expect to keep most of the profits it would  
10 generate, and RTI would get a small percentage of those  
11 profits.

12           Q.     Okay. Let's go back to the formula.

13           A.     Now, I showed you earlier -- at the very  
14 beginning, we talked about some terminology, and we  
15 talked about the formula.

16           So the formula is, what's the royalty rate,  
17 and what's the royalty base, and you multiply those two  
18 together, and you'll get a reasonable royalty.

19           The royalty rate I determined from my analysis  
20 of all the Georgia-Pacific factors, all the information  
21 I considered, I believe a reasonable royalty rate would  
22 have been 20 percent on every sale of an Integra  
23 syringe.

24           Now I'm going to talk a little bit about the  
25 royalty base and how we go -- how I got to the royalty

1 base.

2 Q. All right. Let's go to the base.

3 A. Now, in the spring of 2000 -- this is around  
4 February 2000. You'll see the signatures here. This is  
5 from the executive approvals by BD from various  
6 executives, including, I believe -- Mr. Kozy's one of  
7 the people who signed off on this document.

8 Yeah, there he is, right there in the middle.

9 Q. And what is this document as you understand  
10 it?

11 A. This was a document that BD's management  
12 presented to its Board of Directors asking for approval  
13 to spend an additional \$66 million, which is -- you'll  
14 see -- you can't really see it, but it's right in there;  
15 we'll see it on another slide -- for what was the  
16 Integra project after spending the \$17 million they  
17 spent on buying Saf-T-Med.

18 So they did a series of projections for the  
19 Board of Directors to approve these -- this  
20 66-million-dollar capital outlay.

21 In other words, they had to substantiate to  
22 the Board of Directors why we're spending \$66 million,  
23 we, BD.

24 So they did financial projections showing that  
25 they were expecting to sell a lot of units of Integra

1 over time, over the next 10 years. And this was all  
2 part of their package that was signed off on by the  
3 Board of Directors.

4 Q. All right.

5 MR. BOWLES: Let's go to the next slide.

6 Q. (By Mr. Bowles) And I think that this is  
7 the -- what we refer to as the CB2 summary.

8 A. Right.

9 Q. It is the capital appropriation request for  
10 the Board of Directors.

11 A. Right. And you'll see in here, although it's  
12 hard to see, it says \$66.4 million.

13 MR. BOWLES: Braden, can we -- we  
14 can't blow it up. Okay. Well, I will later.

15 THE WITNESS: Okay.

16 VIDEO TECH: Where it says -- where is  
17 it? Right here (indicating)?

18 MR. BOWLES: Yes. 66, I think, .4.

19 A. And it's also in the table.

20 Q. (By Mr. Bowles) Okay.

21 A. Right there.

22 Q. Okay. We'll get a better one for you.

23 A. Okay.

24 Q. Okay. You want to -- anything else you want  
25 to say about that?

1           A.     No.    I think that's it.

2           Q.     All right.

3                   THE WITNESS:   If you'll go to the next  
4 slide, please.

5           A.     Now, this slide is just stating the same  
6 financial projections from, again, right before the  
7 hypothetical negotiation from December 2000.

8                   The earlier slide was a number of units they  
9 projected for Integra.  These are the dollars, expressed  
10 in dollars.  Over \$2 billion in sales and over 70 -- 720  
11 million in profits over a 10-year period that they were  
12 expecting.

13          Q.     (By Mr. Bowles) This is BVS's projection.

14          A.     Oh, I'm sorry.  I apologize.  Let me back up.  
15 Yes.

16          Q.     Yeah.  Let's make a distinction between --

17          A.     I need to clear that up.  I apologize.

18          Q.     -- BVS and BD, because you've really got two  
19 sets of projections?

20          A.     Yes.  I need to clear that up.

21                   This is from the December 2000 timeframe.

22 Mr. Shaw mentioned that RTI hired a company, an outside  
23 independent appraisal firm, to come in and put a value  
24 on RTI, because RTI was in the process of raising  
25 additional money and the like.

1           BVS came in, looked at the business model for  
2 RTI, did some analysis, and they prepared projections.  
3 These are BVS's projections for VanishPoint.

4           Looking over time, they expected that over a  
5 10-year period, RTI -- they believed it was reasonable  
6 to expect at that time, that RTI would generate sales  
7 over \$2 billion and operating profits of over \$700  
8 million on the sale of VanishPoint.

9           Q.     Okay. So you relied on these projections?

10          A.     I -- I didn't rely on them. I used them as  
11 confirmatory of what the parties would have known or  
12 considered at the time of the hypothetical with respect  
13 to how realistic or how reasonable were the BD  
14 projections.

15          Q.     All right. Well, let me ask you this:

16                 Yesterday BD's counsel, in his cross-  
17 examination of Mr. Shaw, I think, read into the record  
18 parts --

19          A.     Yes.

20          Q.     -- of that valuation regarding the -- that  
21 it's projecting future events, and therefore,  
22 speculative.

23                 Do you recall that?

24          A.     I do.

25          Q.     All right. Have you ever put together a

1 valuation report before?

2 A. I do valuation studies all the time, and I  
3 have to put those kind of statements in my report. In  
4 fact, I don't know of a single valuation report I've  
5 ever read or seen, including the ones I've authored,  
6 where you're doing financial projections, where you  
7 don't put in that kind of language.

8 Because I cannot guarantee the future, and  
9 nobody in this room can guarantee the future. So those  
10 are standard statements.

11 THE WITNESS: And if you could go two  
12 slides ahead, for example, and then we'll come back, but  
13 since you raised that question -- there.

14 A. This is a statement from the BVS valuation  
15 report. And this relates to GP Factors 8, 9, 10, and  
16 13.

17 BVS determined that as of December 8th, 2008,  
18 that the fair market value of the common equity of RTI  
19 was \$337 million.

20 And this is despite the fact that they put in  
21 statements in there, we can't guarantee these  
22 projections. We can't guarantee the future. They still  
23 said that the fair market value of the company was \$337  
24 million.

25 If they had come in and done an analysis and

1 said, we think this thing is so speculate --  
2 speculative, they would have never issued a report and  
3 they never would have placed a value on this number and  
4 never would have signed a report and put their name to  
5 it.

6 Q. So are you saying that that kind of disclaimer  
7 is not unusual?

8 A. It's common practice. There's nothing special  
9 or unique about it.

10 Q. All right. Now, where do you want to go?

11 A. Well, you need to go back to the previous  
12 slide.

13 Q. Okay.

14 A. Okay. So this is really interesting. This is  
15 an overlay of the U.S. projected sales in that same  
16 rough time period of 2000, around the time of the  
17 hypothetical negotiation.

18 The -- the broken-up line is the RTI  
19 projections of VanishPoint sales --

20 Q. From the BVS --

21 A. -- from the BVS study --

22 Q. All right.

23 A. -- over a 10-year period.

24 The BD projections are the solid green line.  
25 What's interesting is you see both of them assume that

1 there would be substantial growth in sales based on what  
2 happened here, because here, the California needlestick  
3 legislation got passed, OSHA came in here with their  
4 mandates, and then finally the federal legislation for  
5 needlestick prevention act was passed.

6           So both companies independently, not knowing  
7 the other company had made projections in the real  
8 world, had had uncanny projections that both overlay  
9 each other, assuming they were both going to come out in  
10 the market with their own products, their own  
11 retractable syringes.

12           The important thing is that both companies  
13 now, at the time of the hypothetical, would have both  
14 known that they both had independently made these  
15 projections and would have shared these projections with  
16 each other.

17           Q. All right. And the BD projections, again,  
18 came from?

19           A. They're internal, that CB2. They're the board  
20 package from the Board of Directors.

21           Q. They were the projections that the Board of  
22 Directors relied on?

23           A. And signed off on.

24           Q. Okay. I think we would then go to the slide,  
25 BD's projections in the spring of 2000.

1           A.     Yes.    So what I did is, I took the BD  
2 projections -- and as I told you, I had to shrink them  
3 back to the year 2000 dollars.

4                    So I took those 10 years of projected sales  
5 and shrunk them from absolute dollars over the 10 years  
6 to what those dollars would have represented in the year  
7 2000.

8                    So they took their 10-year projected sales,  
9 and they said, well, our sales would be about \$363  
10 million, if you look at it in the year 2000.   The  
11 absolute number was about \$970 million, if you added all  
12 10 years.

13                   Now, their projected operating profits would  
14 have been \$670 million over 10 years, but expressed in  
15 the year 2000 dollars, what we call present value  
16 dollars, it would have been \$221 million.

17                   So they were expecting to enjoy lots of sales  
18 and lots of profits.

19           Q.     Okay.   And, again, these -- these projections  
20 come from?

21           A.     They were BD's projections from the board  
22 package.

23           Q.     All right.

24                   MR. BOWLES:   Then the next slide.

25           A.     Well, the next slide is where I've taken the

1 royalty rate of 20 percent that I've discussed, and I've  
2 applied it to a royalty rate of \$363 million.

3           And if you do the math and multiply those two  
4 numbers, you'll get \$72,670,000 as what would have been  
5 the lump sum royalty that RTI and BD would have agreed  
6 to pay -- would agree to settle on as a license for BD  
7 to get a 10-year license from then through the time of  
8 trial to use the Shaw patents in any manner it wanted  
9 to.

10           Q.     (By Mr. Bowles) Let me ask you this,  
11 Mr. Bratic.

12           A.     Yes.

13           Q.     This number right here (indicating).

14           A.     Yes.

15           Q.     Did BD achieve those sales?

16           A.     They did not.

17           Q.     How does that affect your opinion?

18           A.     Well, it doesn't, because as I said earlier,  
19 the issue is what was known and knowable at the time of  
20 the hypothetical negotiation. And at that time of the  
21 hypothetical negotiation --

22                   THE WITNESS: Can you go back to the --  
23 Braden, to the graph with the two overlying graph lines?  
24 About two back. Yes.

25           A.     At the time of the hypothetical negotiation,

1 this is what the parties would have known, that their  
2 expectations, as the video clips that you played this  
3 morning for the jury show, BD knew that there was a big  
4 change and shift in the marketplace after 1995.

5           And as they were marching along to the  
6 hypothetical negotiation, they had changed their  
7 thinking a lot about retractable syringes, so much so  
8 that they were committing millions of dollars to the  
9 project, this Manhattan project, to get a product on the  
10 market, and they needed a license from BD, because they  
11 couldn't design-around those patents.

12           And what -- BD and RTI would have sat down,  
13 and they would have looked at these projections and  
14 recognized that both companies were projecting that  
15 there would be significant increase in sales over time.

16           And what's relevant is what they reasonably  
17 knew and reasonably anticipated was going to happen at  
18 the time of the hypothetical negotiation, because that's  
19 when they execute the license --

20           Q.     (By Mr. Bowles) All right.

21                     MR. BOWLES: Let's --

22           A.     -- not 10 years later.

23           Q.     (By Mr. Bowles) Sorry.

24                     MR. BOWLES: Let's go back to the slide  
25 we were on before, Braden.

1 Q. (By Mr. Bowles) Now, let me ask you this.

2 A. Yes.

3 Q. This is a lump-sum royalty, right?

4 A. Well, the 72.6 million.

5 Q. Well, right. Yes.

6 A. But it's based on projected unit sales. So  
7 it's really running royalties over time, but they're  
8 just going to pay that money upfront to B -- or to RTI  
9 as a lump sum.

10 Q. Let me -- let me ask you this: Earlier in  
11 your testimony --

12 A. Yes.

13 Q. -- you said this is a little bit like renting  
14 an apartment --

15 A. Right.

16 Q. -- that you pay over -- you know, every month.

17 A. Right.

18 Q. Okay. But here you're recommending, not a  
19 payment every month --

20 A. Right.

21 Q. -- or every -- you know, on a periodic  
22 basis --

23 A. Right.

24 Q. -- you're talking a lump sum payment --

25 A. Right.

1 Q. -- not a running royalty.

2 A. Correct.

3 Q. I mean, why is that?

4 A. Well, because, like the apartment analogy, I  
5 guess, is, RTI would have no idea whether BD wants to  
6 occupy that apartment for 10 years. They have no idea.  
7 All they know is, once they give them a license or give  
8 them the keys to that apartment, RTI's pretty much out  
9 of that apartment.

10 And with BD controlling -- having 70 percent  
11 market share, BD's going to have a lot of influence in  
12 the marketplace on what's going to happen to RTI's  
13 products.

14 And remember, when RTI gives a license to BD,  
15 for every sale that BD makes, that's one less sale RTI  
16 gets to make, and RTI's now losing profits on every  
17 sale. And so the only way they make up their money is  
18 to get a partial royalty on what BD projected would be  
19 those sales.

20 As Mr. Shaw testified yesterday, he needed to  
21 have assurance that BD would be taking his patents  
22 seriously and would be out there in the marketplace  
23 pushing their product, their Integra product, as hard as  
24 he was pushing his RTI product.

25 Because if they didn't push their Integra

1 product as hard as he was pushing his RTI product, then  
2 RTI would lose a lot of money.

3 And the day that RTI, in May 2000, signs that  
4 license with BD, the value of RTI immediately drops and  
5 drops by a lot, to a lot less than \$336 million.

6 And when that company, BVS, did a valuation of  
7 RTI and said RTI was worth \$336 million, RTI did not  
8 know anything about these internal BD documents and BD's  
9 Manhattan project.

10 So the company that did the valuation had no  
11 idea how big an impact BD could have in the marketplace  
12 on RTI. And that's why they still said the company was  
13 worth \$336.

14 But if you come in there right after that and  
15 say, well, now, we've given a license to BD, they have  
16 70 percent market share, they've got all these  
17 projections about how they anticipate doing with  
18 Integra, then immediately the value of RTI drops  
19 significantly from \$336 million overnight.

20 And so that's why they have to be compensated  
21 for it at that time, to make up for that loss.

22 Q. Okay.

23 MR. BOWLES: Let's go to the slide that  
24 says RTI's Reasonable Royalties, May 2000.

25 A. Right. All right. So here -- I'm trying to

1 put in perspective that 72-million-dollar lump sum  
2 royalty.

3 Q. (By Mr. Bowles) Is this sort of a reality  
4 check in a way?

5 A. It's a reasonableness check.

6 Q. Okay. I'm sorry.

7 A. And so what we know here is that between the  
8 combination of what -- that BD paid for Saf-T-Med, the  
9 acquisition, and their additional capital investment of  
10 \$66 million, they had committed \$83.4 million to go  
11 forward with the Integra project.

12 And I've got a line running through here,  
13 which is the \$72,600,000 royalty for comparison  
14 purposes.

15 Q. That's your conclusion?

16 A. Right. So my opinion is that the lump sum  
17 royalty would have been 72 million.

18 Now, we already know that BD had committed an  
19 equivalent amount or more for, in a sense, a lump sum  
20 amount, because they were willing to pay that capital to  
21 push forward the Integra project. They were willing to  
22 spend \$83 million for a project to acquire Saf-T-Med and  
23 then improve on Saf-T-Med.

24 Now, we also know that BV -- BD's own  
25 projection showed that it expected to generate about

1 \$221 million in profits back in the year 2000.

2           So if they paid a 72 percent -- 72 million in  
3 royalties, you see they still knew they were going to  
4 keep -- a lot of the future profits were still going to  
5 stay in BD's pockets.

6           Finally, if you look at the value of RTI, the  
7 value of RTI was \$336 million based on one product,  
8 VanishPoint, which that shows you that the marketplace  
9 at that time knew that retractable syringe technology  
10 was very valuable.

11           MR. BOWLES: Braden, don't go to the next  
12 slide yet.

13           Your Honor, the next slide is --

14           THE COURT: Covered by the protective  
15 order?

16           MR. BOWLES: Exactly.

17           THE COURT: Very well.

18           Those not subject to the protective order  
19 need to step out briefly. This shouldn't take very  
20 long. Thank you.

21           MR. BOWLES: It will not take long.

22           (Courtroom cleared.)

23           (REPORTER'S NOTE: The testimony is filed  
24 under seal. Sealed Section 2.)

25           MR. BOWLES: Your Honor, we can now bring

1 the -- everybody back in.

2 THE COURT: Very well. If someone will  
3 help us notify -- take the slide down.

4 MR. BOWLES: Yeah, take the slide down.  
5 Yeah. There you go.

6 (Audience allowed back in courtroom.)

7 Q. (By Mr. Bowles) Okay. Mr. Bratic, we now have  
8 the negotiating table back.

9 A. Yes.

10 Q. What -- did you want to sum up with that or --

11 A. Well, what I -- I just summed up some of the  
12 key factors, and at the end of the day, in May 2000,  
13 with RTI and BD knowing and assuming that the Shaw  
14 patents are valid and infringed, that in my opinion,  
15 they would have agreed to a lump sum royalty of  
16 \$72,600,000 at that time.

17 Q. Which I think is the last -- is that your last  
18 slide?

19 A. Slide, yes.

20 MR. BOWLES: Your Honor, we pass the  
21 witness.

22 THE COURT: Cross-examination.

23 MR. DAWSON: May it please the Court.

24 THE COURT: Yes.

25 CROSS-EXAMINATION

1 BY MR. DAWSON:

2 Q. Good morning, Mr. Bratic.

3 A. Good morning.

4 Q. Your date of hypothetical negotiation, I think  
5 you've told us, is in May of 2000, correct?

6 A. Correct.

7 Q. And that is the date that you say was the  
8 first date of first infringement, correct?

9 A. That's the date I assumed was the date of  
10 first infringement based on the documents I've seen in  
11 this case.

12 Q. Right. And just so that the jury will  
13 understand, the date of the hypothetical negotiation  
14 occurs on the date that you've assumed to be the date of  
15 first infringement.

16 A. Correct.

17 Q. Okay. I think you said in your report, sir,  
18 that you looked at two user studies to determine that  
19 the date of hype -- I mean, the date of infringement  
20 and, therefore, the date of hypothetical negotiation was  
21 on or about May of 2000.

22 Do you remember that?

23 A. Well, I don't have my report in front of me.  
24 But I had several paragraphs in my report where I talked  
25 about different studies, user studies with nurses, for

1 example, in clinics and hospitals where BD had taken its  
2 safety syringe and was testing and evaluating it with  
3 nurses, as I understand.

4 Q. Okay. Let's look at Paragraph 242 of your  
5 report.

6 A. Do you have a hard copy, by the way?

7 Q. It's going to come up on your screen, sir, I  
8 believe.

9 A. Would you happen to have a hard copy of my  
10 report?

11 Q. Yes, I'll get you a hard copy.

12 A. Thank you.

13 MR. BOWLES: Of course, Your Honor, we  
14 would object to the report as being hearsay. I assume  
15 this is going to be used a demonstrative.

16 MR. DAWSON: This is going to be used as  
17 a demonstrative. We're not going to offer it.

18 Q. (By Mr. Dawson) You see Paragraph 242 of your  
19 report, sir?

20 A. I do.

21 Q. And you say in there -- you refer to a -- both  
22 a March and a May 2000 user study.

23 Do you see that?

24 A. Let me look.

25 Yes, I do see that.

1 Q. And the paragraph we're looking at, sir, it  
2 refers, I believe, to the March study, which was of a  
3 3mL Integra syringe.

4 Do you see that, sir?

5 A. Yes.

6 Q. And are you aware, sir, that the study that  
7 was done in May of 2000 was also of a 3ml syringe,  
8 correct?

9 A. I don't know. I'd have to look at it. I  
10 didn't memorize it.

11 Q. If you look at -- just a second, sir. If you  
12 look at Paragraph 241 --

13 A. Of my report?

14 Q. -- of your report.

15 A. Sure.

16 Q. You see how it refers to a May 2000 user  
17 study?

18 A. Yes.

19 Q. And then there's -- you see Footnote 345  
20 refers to a BD document?

21 A. I do.

22 MR. DAWSON: May I approach Your Honor?

23 THE COURT: Yes.

24 Q. (By Mr. Dawson) I am going to show you the BD  
25 document that's referenced in your report, sir, and just

1 have you confirm that the document you refer to talks  
2 about a study of a 3mL Integra syringe.

3 A. Well, excuse me. I didn't mean to cough.  
4 Well, you're giving me one page of this document, and  
5 the page of this document -- let me look at it.

6 I'm sorry. Your question is, is this one of  
7 the documents I considered, yes.

8 Q. And that document --

9 A. Let me look.

10 568, yes.

11 Q. And that document references a study of a 3mL  
12 Integra syringe, correct?

13 A. Well, this page does.

14 Q. Okay.

15 A. I don't have the entire document.

16 Q. All right, sir. So the two studies that you  
17 looked at that you say support your hypothetical  
18 negotiation in May of 2000 were both studies of the 3mL  
19 Integra syringe, correct?

20 A. Well, let me look. Bear with me.

21 I'm sorry. It's not clear to me what your  
22 question is, because my discussion about the  
23 hypothetical negotiation goes all the way to  
24 Paragraph 237, and I talked about more than just two  
25 studies.

1 Q. I understand that, sir.

2 A. I just wanted to be clear.

3 Q. What you're saying in your report, you say  
4 that the product was in development sufficient for  
5 infringement to have occurred in May of 2000, correct?

6 A. No. That's not quite what I'm saying at all.

7 Q. The doc -- the product that was being  
8 developed in May of 2000, do you deny that it was the  
9 3mL Integra?

10 A. Well, that I don't know. What I do know is  
11 from the documents I cited from Paragraphs 237 all the  
12 way through 244 of my report dealing with the  
13 hypothetical negotiation, I point to several studies  
14 that BD did on what I was asked to assume were  
15 infringing devices that were tests that were not being  
16 done for 510 submission.

17 In other words, they were test studies to  
18 determine user suitability. Had nothing to do with  
19 submissions to the FDA to get clearance for those  
20 products. So they would not have been exempted under  
21 the patent statute as being for testing under the  
22 federal patent statute protecting them from  
23 infringement.

24 I was asked to assume that the activities  
25 engaged in, starting with the late -- late 1999 through

1 no later than May 2000, were studies that were being  
2 done under the conjoint analysis that's been discussed,  
3 and otherwise that were used to determine user  
4 suitability.

5 And under the patent statute, I was asked to  
6 assume that a patent is assumed to be infringed if it's  
7 made, used, offered for sale, or sold.

8 Now I know that the Integra did not come on  
9 the market till 2002, but I was asked to assume that  
10 those user suitability studies with nurses in these  
11 clinical environments were done for the express purpose  
12 of testing user suitability. And it was a use of what  
13 was considered to be an infringing device.

14 But it's not for me to say whether it was  
15 infringing or not. I'm just telling you what I assumed  
16 under the facts of those studies.

17 Q. Do you have any evidence, sir, that any of  
18 these studies that you are referring to included the 1mL  
19 Integra?

20 A. I'd have to look at the studies.

21 Q. Do you have any evidence, as you're sitting  
22 here today, that any of these studies included the 1mL  
23 Integra?

24 A. I don't have the studies, and I didn't  
25 memorize them, but I' be happy -- if you can give them

1 to me, I'm happy to review them.

2 Q. Do you have any evidence, sir, that you can  
3 point us to that any of these studies covered the 1mL  
4 Integra?

5 A. Well, I can't say that I have any evidence, if  
6 you haven't presented me with the documents for me to  
7 review to refresh my recollection to determine whether  
8 they did or didn't have the 1ml in them.

9 Q. Can you identify for this jury any evidence  
10 that supports a contention on your part that any of  
11 these studies included the 1mL Integra?

12 A. Well, I didn't discuss the specifics of the  
13 kind of products in the narrative portion of my  
14 paragraphs. So without going in and looking at the  
15 underlying documents, as I sit here, I can't tell you  
16 whether those studies involved a 1 or a 3ml or a 1 or a  
17 3cc Integra-type product. I just can't.

18 Q. And we do know that the user studies in March  
19 and May only involve the 3ml, correct?

20 A. Well, the page you showed me indicated that.

21 Q. Okay.

22 A. But we didn't have the entire document.

23 Q. Now, in May of 2000, there are three  
24 patents-in-suit. You're aware of that?

25 A. Yes.

1 Q. And in May of 2000, only the '733 patent had  
2 been issued, correct?

3 A. That is correct.

4 Q. And RTI is not asserting that the 3mL Integra  
5 syringe infringes the '733 patent, is it?

6 A. I took some notes at the back -- in the room  
7 during the trial. I'd just have to see in my report  
8 whether I made any reference to it.

9 May have. So let me look.

10 Q. I've got a document that will speed this  
11 along, if you're interested.

12 A. Oh, sure.

13 MR. DAWSON: Let's pull up the -- hold  
14 on -- take that down a second.

15 May I visit with Counsel, Your Honor?

16 THE COURT: Yes. Why don't you pull this  
17 document down in the meantime.

18 (Pause in the proceedings.)

19 Q. (By Mr. Dawson) Let me -- let me read you --  
20 rather than showing it, let me just read you a pleading  
21 that was jointly filed -- or portions of a pleading that  
22 was jointly filed by the parties in this case, okay?

23 A. Sure.

24 Q. Plaintiffs contend that the 1mL Integra  
25 syringe infringes Claims 1, 24, and 36 of the '733

1 patent and Claims 43, 47, 55, and 60 of the '224 patent.  
2 Plaintiffs contend that the 3mL Integra syringe  
3 infringes Claims 10 and 25 of the '077 patent and Claims  
4 43, 47, 55, 60, and 61 of the '224 patent.

5 Now, would that refresh your recollection,  
6 assuming that's accurate, Mr. Bratic, that RTI is not  
7 contending that the 3mL infringes the '733 patent?

8 A. Well, if that's what you read, if that's in a  
9 joint stipulation from the parties, then that would be  
10 correct.

11 Q. Okay. Now, the '077 patent wasn't issued  
12 until after May 2000, correct?

13 A. It issued in July of 2000.

14 Q. And the '224 patent didn't issue until after  
15 May of 2000, correct?

16 A. That's correct.

17 Q. So the test conducted in May and March of 2000  
18 could not have infringed the '077 or '224 patent because  
19 they hadn't issued yet, correct?

20 A. No, but for the purpose of a hypothetical, the  
21 patents are assumed to be valid and infringed, and it's  
22 assumed that the parties would have knowledge about the  
23 patents being issued.

24 In fact, because the patent issued in July  
25 2000 and the parties would have been on notice that the

1 application had been filed, which became the '077  
2 patent, and that the notice of allowance had already  
3 been given for the '077 patent. So that would have been  
4 known at the time of the hypothetical negotiation.

5 Q. The parties would not have known whether the  
6 '077 patent or the '224 patent was going to be issued.  
7 There's no guarantee of that, correct, in May of 2000?

8 A. No. That's not true, because if you're  
9 assuming a hypothetical negotiation and if you look at  
10 that slide that I showed the jury, it says that both BD  
11 and RTI are to assume that the patents are valid and  
12 infringed.

13 And you can't have a hypothetical negotiation,  
14 under Georgia-Pacific, if you don't presume that the  
15 patents aren't valid and have been infringed. So there  
16 is a presumption. Remember, it's a hypothetical  
17 negotiation that the Georgia-Pacific case imposes on us.

18 So we have to bring that hypothetical  
19 information into the hypothetical negotiation and assume  
20 that the parties would have known that all three of  
21 these patents would at some point issue and would be  
22 valid.

23 And that BD stuck its toe in the marketplace  
24 with a product that read on the claims of those patents,  
25 they would infringe, and they would be not allowed to

1 sell those products without a license to the Shaw  
2 patents.

3 Q. Okay.

4 A. That's a supposition. I didn't make it up.  
5 It's given to me by the law.

6 Q. Maybe I didn't ask a very good question. Let  
7 me try again, Mr. Bratic.

8 A. Sure.

9 Q. When the parties are sitting down --

10 A. Right.

11 Q. -- at this table that you put up on the  
12 screen --

13 A. Correct.

14 Q. -- the date is May of 2000?

15 A. On or about May of 2000.

16 Q. At that time, the '077 patent had not issued.

17 A. In actuality, that's correct.

18 Q. And the parties --

19 A. It issued two months later.

20 THE COURT: Gentlemen, if you will both  
21 not talk at the same time.

22 THE WITNESS: Sure, Your Honor. Sorry.

23 Q. (By Mr. Dawson) As they're sitting there in  
24 May, they don't know for certain whether the patent will  
25 issue or won't issue, because that's an event in the

1 future, correct?

2 A. No, that's not true, because it's a  
3 hypothetical negotiation.

4 Q. Okay, sir. I understand your position.

5 A. We're going in a time machine, and you  
6 wouldn't have a hypothetical negotiation if you didn't  
7 sit there assuming that the patents were valid and  
8 infringed.

9 So there is an assumed knowledge that the  
10 patents will issue, if they haven't. Otherwise, you  
11 wouldn't be at that hypothetical negotiation.

12 Q. So it's your position, just so we're clear,  
13 that in May of 2000 they have the ability to read into  
14 the future and predict what the Patent Office will do?

15 A. They -- it's assumed that the parties would  
16 have known that the patents were valid, and that if BD  
17 didn't take a license, they'd infringe.

18 Q. And just so the record is clear --

19 A. Yes.

20 Q. -- the only patent that they could -- that had  
21 issued that could have been licensed in May of 2000 was  
22 the '733 patent, correct?

23 A. In the real world but not in the hypothetical  
24 negotiation, because in the hypothetical negotiation,  
25 they would have gotten all future rights to all three

1 patents.

2 Q. Now, this May 2000 user study --

3 A. Yes.

4 Q. -- that we looked at, that did not use the  
5 actual spring-based design of the Integra syringe,  
6 correct?

7 A. You'd have to give me a document.

8 Q. Let me show you.

9 A. The entire document.

10 Q. Let me show you a page that was referenced in  
11 your report and just ask you to confirm that it says,  
12 and I quote: The device used was a modified 3ml  
13 syringe, not the BD spring-based device.

14 Did I read that correctly, sir?

15 A. You read that correctly from this one page.

16 Q. Okay.

17 A. But not the entire document.

18 Q. And do you have any evidence to the contrary,  
19 sir?

20 A. Well, you're not giving me the entire document  
21 to look at.

22 Q. That was not my question. Do you have any  
23 evidence, based on all the time you spent working on  
24 this case, to the contrary?

25 A. Well, I haven't memorized every document in

1 this case, and I haven't memorized that entire conjoint  
2 analysis, but I'm happy to look at it, if you give it to  
3 me.

4 Q. And whatever this device was that was used in  
5 this user study in May of 2000, you're not here to say  
6 whether that device infringes or not infringes on the  
7 '733 patent, correct?

8 A. I'm not here to testify as to what is an act  
9 of infringement or not. I've been asked to assume that  
10 the studies done by BD, beginning in the fall of late  
11 1999 through no later than May 2000, involved products  
12 or prototypes of products that were tested for user  
13 acceptability that would constitute an act of  
14 infringement. That's what I've been asked to assume.

15 Q. And you haven't seen -- whatever this device  
16 was that was used in May 2000, you haven't seen it, have  
17 you?

18 A. Have I physically seen it? No.

19 Q. We know that the actual product didn't come  
20 out until two years later, correct?

21 A. The launch was, I believe, in March of 2002.

22 Q. So approximately two years later, correct?

23 A. Almost two years later.

24 Q. And you sat here through Mr. Sheehan's  
25 testimony, did you not?

1           A.     I did.

2           Q.     And you didn't hear him say or testify that  
3 there was a device out in March or May of 2000 that  
4 infringed on the patents; you didn't hear him testify to  
5 that, did you?

6           A.     I don't believe he was asked about it.

7           Q.     So, therefore, he didn't give any --

8                   THE WITNESS:   Bless you.

9           Q.     (By Mr. Dawson) -- he didn't give any  
10 testimony to that effect, did he, sir?

11          A.     Well, he didn't give any testimony, because he  
12 wasn't asked about that.

13          Q.     Okay. Now, the 1mL Integra was not -- its  
14 first date of manufacture was in May 2003.

15                 Do you agree with that?

16          A.     I don't recall offhand.

17          Q.     Do you dispute it?

18          A.     Without looking at my report -- I know I  
19 believe the 3ml came out in March 2002 as a commercial  
20 launch.

21          Q.     Do you -- do you -- here, let me show you  
22 this.

23                   MR. DAWSON:   May I approach, Your Honor?

24                   THE COURT:    You don't need permission.

25                   MR. DAWSON:   Okay. Thank you. Old

1 habits die hard.

2 THE COURT: I understand.

3 THE WITNESS: Apologize for coughing.

4 Q. (By Mr. Dawson) Let me show you --

5 A. Yes.

6 Q. -- an interrogatory answer from this case,  
7 sir. And I'll just represent to you that BD was asked  
8 to provide information on when it manufactured the 1ml.  
9 And there's a chart attached.

10 Let me help you.

11 A. I just want to see what document you're giving  
12 me. You give me a lot of pages. I'd like to see the  
13 document, if you don't mind.

14 Q. I don't mind.

15 A. Thank you.

16 So this BD and Company's revised and corrected  
17 responses. Okay. So then you wanted me to go back  
18 here -- is this Exhibit B? Is this cited to a text?

19 Q. Yes, sir. If you look in -- the interrogatory  
20 asks for dates of manufacture. BD responds that it  
21 manufactured the --

22 A. 1cc at Holdrege, Nebraska.

23 Q. Right.

24 A. And the dates indicated and announced in  
25 Exhibit B, so let's go to Exhibit B.

1 Q. Does the first date of manufacture, according  
2 to Exhibit B, reflect May 2003?

3 A. As far as commercial manufacture, yes.

4 Q. Okay. And you have not offered a date of  
5 hypothetical negotiation for the 1mL Integra, have you?

6 A. No. I'm assuming that I've offered a  
7 hypothetical negotiation for BD to get a license to  
8 practice the Shaw patents in May 2000 for a 10-year  
9 period in any way it chose to for whatever products it  
10 wanted to make, which would embody the Shaw patents.

11 Q. I'm sorry. I must have asked a bad question  
12 again.

13 Have you offered a date of hypothetical  
14 negotiation specific for the 1mL Integra?

15 A. Yes. It would be subsumed within the May 2000  
16 negotiation.

17 Q. Okay. You're not offering a date of  
18 hypothetical negotiation in May 2003, correct?

19 A. No.

20 Q. Okay. Now, you mentioned this morning  
21 Mr. Bowles asked you some questions about projections.

22 Do you remember that?

23 A. Yes, I do.

24 Q. And you said you acknowledged that the BVS  
25 projections have a statement in there that they are

1 speculative, correct?

2 A. Well, they talked about the -- basically, they  
3 talked about the projections being speculative in the  
4 sense that they can't guarantee the outcome.

5 Q. Right.

6 A. Nobody can.

7 Q. And I think you said that you've done  
8 projections and that you oftentimes include disclaimers  
9 that the projections are speculative.

10 A. No. I do -- well, in the sense that when I do  
11 evaluations, whether it's intellectual property rights  
12 or other type of business assets, and I do forward-  
13 looking projections beyond the date of valuation,  
14 financial projections, I will put limiting states in  
15 there, as do all people who do valuations, saying that  
16 we cannot guarantee the future and there's no certainty  
17 that those events will occur.

18 Q. Okay.

19 A. And that doesn't mean that you still can't do  
20 an analysis and conclude as to the value of an asset or  
21 its present value at that given moment in time just  
22 because you can't absolutely guarantee that the future  
23 will happen the way you project it will.

24 Q. Would you agree with me that when the parties  
25 are sitting at this table in May of 2000, they do not

1 know how many products are going to be sold in the  
2 future?

3 A. They do not know with absolute certainty.  
4 But what I found uncanny was when I showed the jury that  
5 bar graph -- I mean, that line graph with those two  
6 separately completely, independently derived projections  
7 for VanishPoint and Integra, it was amazing and uncanny  
8 how independent of each other both companies were able  
9 to hit the same number. So it was amazing.

10 And at the hypothetical negotiation, those  
11 companies would have taken into consideration that BD's  
12 projections would have been vetted at the highest levels  
13 of the corporation. The Board of Directors would have  
14 approved those.

15 So although the Board of Directors couldn't  
16 guarantee to their shareholders that those projections  
17 would happen, they would know that they were reasonable  
18 and they were acting on it to make investments.

19 MR. DAWSON: Your Honor, I object to the  
20 last part of the answer as completely nonresponsive.

21 THE COURT: I've forgotten your question,  
22 the answer went on so long.

23 Please listen to the question and respond  
24 to the question. This will move along a lot quicker.

25 THE WITNESS: Sure.

1 Q. (By Mr. Dawson) The point is, Mr. Bratic, when  
2 they're sitting there in May 2000, neither party knows  
3 now many of the products that they're projecting to be  
4 sold are actually going to be sold.

5 Would you agree with that?

6 A. Well, they -- they don't know with absolute  
7 certainty.

8 Q. Okay.

9 A. I'll certainly agree with that.

10 Q. Now, you were offering a paid-up lump-sum  
11 royalty in this. That's the royalty that you're  
12 suggesting this jury accept, correct?

13 A. That, in my opinion, would be the appropriate  
14 royalty that the parties would have executed in May of  
15 2000.

16 Q. And so that the jury will understand, what  
17 you're saying is that Mr. Shaw would have demanded and  
18 BD would have agreed to pay the \$72 million in May 2000,  
19 correct?

20 A. Correct.

21 Q. And that would have -- it's a single payment,  
22 and it doesn't matter whether BD sells one product, a  
23 hundred products, a thousand products, or a million  
24 products. They still have to pay the \$72 million?

25 A. Well, that's correct. They would have to pay

1 the \$72 million, but the parties would have known and  
2 expected that BD was planning on selling a lot of  
3 product.

4 Q. And there's another kind of royalty that's  
5 often used in patent cases, correct?

6 A. Yes.

7 Q. And that's what's called a running royalty?

8 A. Correct.

9 Q. And that's where you pay a percentage for each  
10 product that's sold, correct?

11 A. Correct, or a percentage or a charge per  
12 product. It doesn't have to be a percentage.

13 Q. Either a set amount of -- a dime per product,  
14 or a percentage, 5 percent, for example?

15 A. Or 20 percent.

16 Q. Right. And in this case, for example,  
17 Mr. Shaw has a running royalty with RTI, correct?

18 A. He does.

19 Q. He gets paid 5 percent of the gross sales for  
20 every product, correct?

21 A. Correct.

22 Q. Okay. Now, in this lump-sum paid-up royalty,  
23 it's a non-exclusive license, correct?

24 A. That's correct.

25 Q. So just -- so I understand -- and by the way,

1 RTI would continue to compete against BD, even though  
2 they've given them this license, correct?

3 A. They -- well, as a result of the license,  
4 they'd compete with them but not effectively. In other  
5 words --

6 Q. They would have the opportunity to compete.  
7 Would you agree with that?

8 A. Certainly, they would have the opportunity.  
9 But had they not given a license to BD in the  
10 hypothetical negotiation, they'd enjoy the market  
11 exclusivity all to themselves and enjoy the profits from  
12 all the products as opposed to just having to take a  
13 royalty or a piece of the profits by licensing BD.

14 Q. But they would be out there in the marketplace  
15 selling the VanishPoint product, correct?

16 A. Yes.

17 Q. And they would be going to hospitals trying to  
18 get the hospitals to buy the VanishPoint product, right?

19 A. Yeah, they would be trying to.

20 Q. And they would be trying to compete against BD  
21 and say buy VanishPoint; don't buy BD, correct?

22 A. That's true.

23 Q. All right. Just so we've got the stage clear,  
24 BD would -- in your hypothetical world, would pay \$72  
25 million for this nonexclusive license, and both parties

1 would be out there trying to sell their product?

2 A. That's correct.

3 Q. All right. And not only could RTI compete  
4 with BD, but they could license to somebody else?

5 A. They could.

6 Q. They could go to another company and say we're  
7 going to license our product to you, right?

8 A. Yeah.

9 Q. And that company would be out there competing  
10 against BD as well?

11 A. Sure. But that would be unrealistic with BD  
12 having 70 percent of the marketshare.

13 Q. And just so the jury will know, since 2000 --

14 A. Right.

15 Q. -- RTI has outsold BD three to one, haven't  
16 they?

17 A. They actually have; that's right.

18 Q. Yeah. They've sold over 200 million dollars'  
19 worth of product, right?

20 A. They have.

21 Q. And BD sales have been about 68 million,  
22 correct.

23 A. Something like that, 68, 69.

24 Q. All right.

25 A. Right.

1 Q. Now, one of the Georgia-Pacific Factors that  
2 you talked about is an analysis of the royalties for the  
3 patents-in-suit, correct?

4 A. Yes.

5 Q. And Mr. Shaw is the named inventor, is he not?

6 A. He is.

7 Q. And he licensed -- I think we've established  
8 he licensed his patents to RTI for a 5-percent gross  
9 royalty.

10 A. That's true.

11 Q. And there was a 500,000 upfront payment.

12 A. With an effective royalty of almost 8 percent.

13 Q. All right.

14 A. To a non-competitor.

15 Q. It's not a paid-up royalty, correct?

16 A. No, it's a pay-as-you-go, because RTI is not a  
17 competitor.

18 Q. They also entered into an agreement with the  
19 Chinese company, BTMD, correct?

20 A. Yes, they did.

21 Q. And according to your report, the amount of  
22 that royalty is 2-1/2 cents -- 2-1/2 to 3-1/2 cents.

23 A. Depending on whether it's 1ml or 3ml.

24 Q. Okay. You would agree that's a running  
25 royalty, correct?

1 A. Yes.

2 Q. It's not a paid-up -- a fully paid-up license,  
3 correct?

4 A. That's correct.

5 Q. And just so the record is clear, Mr. Shaw  
6 nor -- neither Mr. Shaw nor RTI has ever entered into a  
7 royalty with a stated amount of 20 percent?

8 A. That's correct.

9 Q. Or even 15 percent?

10 A. That's right.

11 Q. Or even 10 percent?

12 A. Well, wait a minute. No, that's not true.

13 Q. Stated amount?

14 A. Stated.

15 Q. Stated amount?

16 A. The effective rate in the BTMD licence is 27  
17 percent.

18 Q. I understand that's your position.

19 A. Well, that's the facts.

20 Q. But -- but they've never entered into an  
21 agreement with a stated amount of 15 percent, correct?

22 A. No, because the BTM (sic) was based on cents  
23 per widget or cents per VanishPoint, licensed  
24 VanishPoint product, which translates to an effective  
25 royalty rate of 27 percent, based on the selling price

1 of the product.

2 Q. And they've never entered -- neither RTI nor  
3 Mr. Shaw has ever entered into a fully paid-up license,  
4 correct?

5 A. That's correct.

6 Q. Now, haven't you previously testified,  
7 Mr. Bratic, that, quote, if you're not sure how much  
8 product you're going to sell or if you're going to sell  
9 at all, you agree to a running royalty? Haven't you  
10 previously given that testimony?

11 A. I may have. I don't recall.

12 Q. You want me to show it to you to refresh your  
13 memory?

14 A. Sure.

15 Q. You remember, you testified in a case called  
16 Anascape versus Microsoft?

17 A. I did.

18 Q. Okay.

19 MR. DAWSON: May 27th from that  
20 transcript, do you have an extra copy of this?

21 Q. (By Mr. Dawson) In Anascape, there was a  
22 dispute about whether there should be a lump-sum royalty  
23 or a running royalty.

24 Do you remember that?

25 A. No, I don't remember the details of it.

1 Q. Okay. Well --

2 A. But there was an issue about the fact that  
3 there was a -- well --

4 Q. Let me --

5 A. A lot of issues in that case.

6 MR. DAWSON: We don't need to put it on  
7 the screen.

8 Q. (By Mr. Dawson) Let me just read this to you  
9 and see if I read this correctly, sir. This is your  
10 testimony at trial.

11 A. Okay.

12 Q. It says quote --

13 A. I'm sorry. Can I look above?

14 Q. Sure. Look at the question.

15 A. Oh, this is where the judge was asking. I  
16 think this is where they presented questions from the  
17 jurors.

18 All right. Okay.

19 Q. Did you testify to the judge and jury in that  
20 case, quote: So one of the advantages of a running  
21 royalty is if you're not sure how much product you're  
22 going to sell or if you're going to sell it at all, you  
23 agree to a running royalty, because then you don't have  
24 to pay anything if you don't sell anything. There's no  
25 downside.

1 Was that your testimony today?

2           A.     It's true, and in that case, there was no  
3 information about what the parties expected the sales to  
4 be. And that's different than this case.

5 Q. Was that your testimony at trial in that case,  
6 sir?

7 | A. It was indeed.

8 Q. And was it truthful testimony?

9 A. It was truthful then, and it is truthful now.

10 | Q. Okay.

11 MR. DAWSON: Your Honor, is this a good  
12 time --

13 THE COURT: Very well. This is a  
14 convenient breaking point.

15 Mr. Potts, if you will take the jury out.

16 COURT SECURITY OFFICER: All rise.

17 (Jury out.)

18 THE WITNESS: May I step down?

19 THE COURT: No.

20 THE WITNESS: Sir?

21 THE COURT: You may not.

22 | Mr. Bratic, have you -- please be seated.

23 Have you testified in my Court before?

24 THE WITNESS: Years ago.

25 THE COURT: Very well. I told you one

1 time to listen to the question --

2 THE WITNESS: Yes, sir.

3 THE COURT: -- and respond to it.

4 THE WITNESS: Yes, sir.

5 THE COURT: You are a professional  
6 witness. You know what that means. And your attorneys  
7 can take you on redirect. This is going to be my final  
8 warning on this.

9 You understand that?

10 THE WITNESS: I do.

11 THE COURT: Very well. You may step down  
12 now.

13 Mr. Bowles, I suggest you talk to your  
14 witness --

15 MR. BOWLES: I will do that, Your Honor.

16 THE COURT: -- over the lunch break.

17 MR. BOWLES: I will do that.

18 THE COURT: Very well.

19 Now, I would say -- Mr. Bowles, you want  
20 to make an offer at this time?

21 Mr. Beck, Mr. Carroll, approach the  
22 bench.

23 (Bench conference.)

24 THE COURT: The high judge has requested  
25 your appearance in his chambers, not the chief judge,

1 but he's the high judge.

2 You understand that?

3 MR. CARROLL: We've been summoned.

4 MR. BECK: We've not in trouble, are we?

5 THE COURT: Very well.

6 (Bench conference concluded.)

7 THE COURT: Mr. Bowles, you want to make  
8 your offer?

9 MR. BOWLES: Your Honor, last night we  
10 filed with the Court eight separate offers of proof.  
11 Four of the offers concern the Court's Daubert and  
12 limine rulings affecting our experts.

13 The affected experts were Neil Sheehan,  
14 Stephen Minkin, Dr. William Hyman, and Walter Bratic.  
15 This Court has previously ruled that portions of their  
16 testimony, as reflected in their expert reports, should  
17 be stricken. The offers of proof explain which portions  
18 of the reports were affected by the -- by this Court's  
19 rulings and pointed out that the testimony in their  
20 depositions that was affected by those rulings.

21 The other four offers of proof address  
22 specific exhibits that are inadmissible under Your  
23 Honor's or Judge Craven's rulings. Those four  
24 categories of exhibits are, one, BD sale of products and  
25 poor quality or effectiveness; two, articles

1 demonstrating long-felt need and state of mind; three,  
2 exhibits regarding BD's market dominance and control;  
3 and, four, exhibits regarding the NMT safety syringe.

4           With all these offers of proof, we have  
5 explained the rulings at issue, the nature of the  
6 testimony or evidence that would be given, if permitted,  
7 the reasons why we think that the evidence should have  
8 been admitted. And we have attached the excluded  
9 exhibits, expert reports.

10           And with several of the experts, we have  
11 attached depositions to show what their testimony would  
12 have been.

13           We, again, offer these excluded exhibits,  
14 reports, and testimony to the Court, and we request the  
15 Court reconsider its rulings on these matters.

16           THE COURT: Very well.

17           MR. BOWLES: Thank you very much, Your  
18 Honor.

19           MR. BECK: Your Honor, we also have a  
20 short offer of proof with the Court's permission.

21           THE COURT: Yes.

22           MR. BECK: Your Honor, we would make an  
23 offer of proof, Defendant's Exhibit 101, which is a  
24 document dated December 1, 2008. And, specifically,  
25 it's Plaintiff's response and objections to Defendant's

1 set of requests for production and, specifically,  
2 Page 13 of the first full paragraph, which specifically  
3 reads, quote: As there presently is no allegation that  
4 the infringing products in this case operate by the  
5 release of a frictional holding mechanism, the requested  
6 document is irrelevant and not likely to lead to the  
7 discovery of admissible evidence.

8                   Secondly, Your Honor, Defendant's Exhibit  
9 368, which is a document dated April 17, 2009, which is  
10 a letter from Mr. Roy Hardin to the Court in response to  
11 Defendant's motion for summary judgment, and  
12 specifically the part of the letter that we're  
13 requesting as part of our offer of proof is Footnote 1  
14 and the sentence which reads, quote: The activation  
15 force required for activating such a syringe by a  
16 frictional release has no relevance to the accused  
17 Integra syringes, comma, which while using friction  
18 and/or clamping forces in some manner to hold the needle  
19 in the projecting position does not use a friction  
20 mechanism to release the handle, end of quote.

21                   Then finally, Your Honor, Volume 2 of  
22 Mr. Shaw's deposition, dated January 13, 2000, in which  
23 he's asked about this concession in their response to  
24 our second set of interrogatories, specifically  
25 Page 135, line 12 through line 17; Page 136, Line 15

1 through Page 137, Line 3.

2 And with the Court's permission, we'll  
3 have that testimony put in the document and submit it to  
4 the Court.

5 THE COURT: Very well.

6 Mr. Dawson, how much more cross would you  
7 estimate you might have?

8 MR. DAWSON: Twenty, thirty minutes.

9 THE COURT: Then maybe some redirect?

10 You still anticipate calling an adverse  
11 witness?

12 MR. BOWLES: Yes, Your Honor, but I don't  
13 think it's going to be real long for our part of it.

14 THE COURT: You should be in a position  
15 to maybe rest midafternoon at the latest?

16 MR. BOWLES: Yes, sir.

17 MR. CARROLL: And, Your Honor, pardon me.  
18 We'd like to claim five of our transition minutes after  
19 we rest.

20 THE COURT: Very well. And reply, if BD  
21 wishes.

22 We'll be in recess.

23 COURT SECURITY OFFICER: All rise.

24 (Recess.)
